

TemBreak PRO

New release

IoT with SMART MCCB

TERASAKI ELECTRIC CO., LTD.
www.terasaki.co.jp

Catalogue No. '23-I68EJ

Key Points of Issuance

- We have newly developed thermal and electronic moulded case circuit breakers from 100 A frame to 630 A frame and have added them to our product lineup under the TemBreak PRO series.
- We have changed the mould for the previous TemBreak2 model from light grey to grey-blue and added the products to the TemBreak PRO series. (Excludes some models)

TABLE OF CONTENTS

1. General	1-1
● Features	1-2
● Selection Chart	1-8
2. Ratings and Specifications	2-1
Moulded Case Circuit Breakers	
① Economical series	2-2
② Standard series	2-4
③ High-fault level series	2-11
④ Current limiting series	2-13
⑤ Switch-disconnectors	2-14
⑥ Non-automatic trip breakers	2-16
⑦ 690V AC Circuit Breaker	2-17
⑧ Special Mounting Dimensions 400 A Frame Circuit Breakers (Refer to the catalogue P64E for the detailed specifications.)	2-18
⑨ Mining Circuit Breakers (Refer to the catalogue P67E for the detailed specifications.)	2-19
⑩ Mining Switch-disconnectors (Refer to the catalogue P67E for the detailed specifications.)	2-21
3. Selection	3-1
① Selection of circuit breakers for selectivity coordination	3-2
② Combination of breakers for cascade breaking	3-5
③ Selection for Type 2 Coordination 50kA at 415V AC	3-6
④ Selection for Type 2 Coordination 70kA at 415V AC	3-9
4. Special Breakers	4-1
① High-Performance Electronic Smart Circuit Breaker (TPOU type OCR)	4-2
② High-Performance Electronic Circuit Breaker (XOW type OCR)	4-11
5. Mounting and Connection	5-1
① Type of connections and mountings	5-2
Connecting parts	5-2
② Insulation distance from the line side	5-4
③ Temperature Ratings	5-6
6. Accessories	6-1
① OCR for electronic breakers	6-2
1 . TPOT type and TPOP type electronic OCR	6-2
2 . XOU type electronic OCR	6-6
3 . XOS type electronic OCR	6-10
② Internally mounted accessories	6-14
1 . Possible combinations	6-14
2 . Ratings and operation data of auxiliary and alarm switches	6-16
3 . Shunt trip device (SH)	6-17
4 . Undervoltage trip device (UV)	6-18
③ Externally mounted accessories	6-21
1 . Overview	6-21
2 . Toggle extension (HA)	6-22
3 . Motor operators (MC)	6-23
4 . External operating handles	6-28
• Breaker-mounted (HB)	6-28
• Door-mounted (HP)	6-40
5 . Mechanical interlock	6-52
• Slide interlock (MS)	6-52
• Rear-connected interlock (MB)	6-61
• Link interlock (ML)	6-62
• Wire interlock (MW)	6-72
6 . Toggle holder (HH) and toggle lock (HL)	6-84
7 . Terminal covers (CF), (CR), (CS)	6-86
8 . Interpole barriers (BA)	6-91
9 . Terminal blocks (TF)	6-92
10. Plug-in auxiliary circuit terminal block	6-100
11. DIN rail adapter (DA)	6-103
12. Door Flange (DF)	6-104
7. Characteristics and Outline Dimensions	7-1
Thermal Magnetic Characteristics	7-3
Electronic Characteristics	7-12
Let-Through Peak Current Characteristics	7-22
Let-Through Energy Characteristics	7-31
Outline Dimensions	7-40
Outline Dimensions (with motor operators)	7-60
Outline Dimensions (Special breakers)	7-72
8. Appendix	8-1
① Maintenance and Inspection Checker	8-2
② Internal resistance and power consumptions	8-3
③ Order Form of Internal accessories	8-4

Product warranty

Please confirm the following product warranty before purchasing and using the product.

1. Warranty period and warranty coverage

If any failure found to be the responsibility of Teasaki Electric occurs during use of the product within the warranty period, the product shall be repaired at no cost via the sales representative or Terasaki Electric sales office. However, if repairs are required on-site at domestic or overseas locations, expenses to send an engineer will be charged.

[Warranty period]

The warranty period of the product shall be for 12 months after the date of purchase of delivery to the designated place. However, the maximum free warranty period is 18 months from the date of manufacture, with a maximum distribution period of 6 months after shipment.

The free-of-charge warranty period of the repaired product will not be extended beyond the free-of-charge warranty period before the repair.

[Warranty coverage]

- 1) The primary failure diagnosis should be performed by users. However, if required by users, Terasaki Electric or Terasaki Electric Sales office may be able to perform the diagnosis for a fee.
- 2) The coverage shall be limited to ordinary use within the usage state, usage methods, usage environment, and other conditions which follow the instructions and precautions given in the instruction manual, user's manual, and caution labels on the product.
- 3) Even within the warranty period, repair cost shall be charged for the following cases.
 - ① Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by selection of hardware or software design on the user side.
 - ② Failure caused by modifications, etc. to the product by the user without any approvals from Terasaki Electric.
 - ③ In case Terasaki Electric product is assembled into a user's device, failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
 - ④ Failure that could have been avoided if the maintenance described in the user's manual has been performed.
 - ⑤ Failure caused by external irresistible forces such as fires or abnormal voltages, and failure caused by natural disasters such as earthquakes, lightning, wind and water damages.
 - ⑥ Failure caused by reasons unpredictable based on scientific technology standards at the time of shipment from Terasaki Electric.
 - ⑦ Any other failure found not to be the responsibility of Terasaki Electric or that admitted not to be so by the user.

*In addition, the warranty applies only to the product delivered. It does not apply to the any damage that is caused by the failure of the product.

2. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the warranty period, Terasaki Electric shall not be liable for compensation to:

- 1) Damages caused by any cause found not to be the responsibility of Terasaki Electric.
- 2) Loss in opportunity, lost profits incurred to the user by failures of Terasaki Electric product.
- 3) Damages whether foreseeable or not, secondary damages, compensation for accidents, and compensation for damages to products other than Terasaki Electric products, caused by exceptional situations.
- 4) Compensation for cost occurring secondarily from replacement work by the user, maintenance of on-site equipment and start-up test run and other operations.

3. Product applications

- 1) When using the products listed in this catalogue, the following conditions must be confirmed and obeyed. The product must be used so that a failure that occurs to the product does not lead to a serious accident. When a damage or failure occurs, the external backup function or fail-safe function must be executed systematically.
- 2) The products listed in this catalogue are designed and manufactured as general-purpose products for application to the general industry field. When considering the use of our products for special applications such as the following equipment and systems, please contact Terasaki Electric sales office to confirm the specifications.

- ① The use that has a significant influence on the public facilities such as nuclear power plants and other power plants of power companies.
- ② The use for railway companies, government offices, etc. that require to build the special quality assurance system.
- ③ The use for aerospace equipment, medical equipment, railway equipment, combustion and fuel equipment, passenger vehicles, manned transportation equipment, recreational equipment, safety equipment, and air conditioner for servers and the cooling facilities that are expected to have a significant influence on life, body, and property.

4. Safety notice

Be sure to read these Instructions and other associated documents accompanying the product thoroughly to be familiarize yourself with the product handling, safety information, and all other precautions before mounting, using, servicing, or inspecting the product.

[Meaning of indication]

Warning

Warning notice with this symbol indicates that neglecting the suggested procedure or practice could result in lethal or serious personal injury.

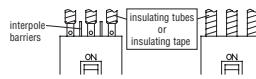

Caution

A caution notice with this symbol indicates that neglecting the suggested procedure or practice could result in moderate or slight personal injury and/or property damage.

■Mounting precautions

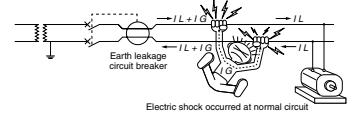

- Electrical work should only be undertaken by suitably qualified persons.
- Do not place the product in an area that is subject to high temperature, high humidity, excessive dusty air, corrosive gas, strong vibration and shock, or other unusual conditions. Mounting in such areas could cause a fire or malfunction.
- Be careful to prevent foreign objects (debris, concrete powder, iron powder, etc.) and rainwater from entering product. These materials inside the product could cause a fire or malfunction.
- For 4-pole breakers, be sure to connect a neutral conductor to the N pole. Otherwise, an over-current may hinder the product from tripping, thus resulting in a fire.
- When connecting cable or busbar to the product, tighten terminal screws to the torque specified in this manual. Otherwise, a fire could result.
- For front-connected breakers, Insulate all bare conductors of the line side until the breaker end. If interpole barriers are packed, be sure to use the barriers; moreover, insulate all bare conductors by insulating tape or the like so that the tape overlaps with the barriers. Insufficient insulation may result in short-circuit.
- Do not block the arc gas vents of the product to ensure adequate arc space. Blocking these vents could result in failure of circuit interruption.

■Handling Precautions

- The earth leakage circuit breaker trips open just when the difference between outgoing current and incoming current exceeds a specified value. Never touch two or more bare live parts simultaneously. The breaker does not respond to electric shock.
- Never touch terminals. Otherwise, electric shock may result.

- When the breaker trips open automatically, remove the cause, then return the handle to the !(ON) position. Should a fault be interrupted, the breaker must be inspected. Otherwise, a fire may result.

■Maintenance Precautions

- Service and/or inspection of the product must be done by persons having expert knowledge.
- Prior to commencing any work on the product, open an upstream circuit breaker or isolator to ensure that no voltage is applied to the product. Otherwise, electrical shock may result.
- When connecting cable or busbar to the product, tighten terminal screws to the torque specified in this manual. Otherwise, a fire could result.

5. Ordering information

Products and specifications appearing in this catalogue are subject to change (including discontinued sales) due to product improvements and other reasons, therefore contact TERASAKI or your local dealer prior to using, considering or ordering the shown products to confirm that the information in this catalogue is the up-to-date.

Selection Chart	1-8

Based Standards

JIS C 8201-2-1 Ann.1 Ann.2 Japanese Industrial Standard
JIS C 8201-2-2 Ann.2

IEC 60947-2 International Electrotechnical Commission

EN 60947-2 European Standard

Completely renewed electronic circuit breakers, ranging from

Among the industry's smallest breakers

Models sizing 100AF or 125AF are the industry's smallest, measuring just 90 mm width, 130 mm height, and 68 mm depth for 3-pole types. 630AF models are of the same dimensions as 400AF versions: 140 mm width, 260 mm height, and 103 mm depth for 3-pole types. Their compactness helps space-saving in distribution switchboards.

Smart MCCBs facilitating energy saving

Our new smart circuit breakers are capable of acquiring, displaying, and transmitting circuit information. They help consolidate and reduce devices needed for energy management systems used at buildings and factories.

★Remote display of circuit information

The TemViewPRO Remote display (optional) can be connected to the smart circuit breakers using a single cable and easily attached to the switchboard panel. It has a back-lit LCD display that is highly visible even in dark places.

TemView PRO

Remote display

★Centralized control of circuit information

The TemComPRO Communication Module (optional) allows network communication of circuit information. A system can be easily developed owing to the Modbus RTU communication protocol. The TemComPRO can be mounted on a DIN rail with a snap-on mechanism and wired using connectors, so it is easy to install for additional installation. With use of a support, the module can also be mounted on the side of the circuit breaker.

TemCom PRO

Communication module

Support to mount the module on the side of the breaker

Modbus

G/W

IoT gateway

Ethernet

Energy management server

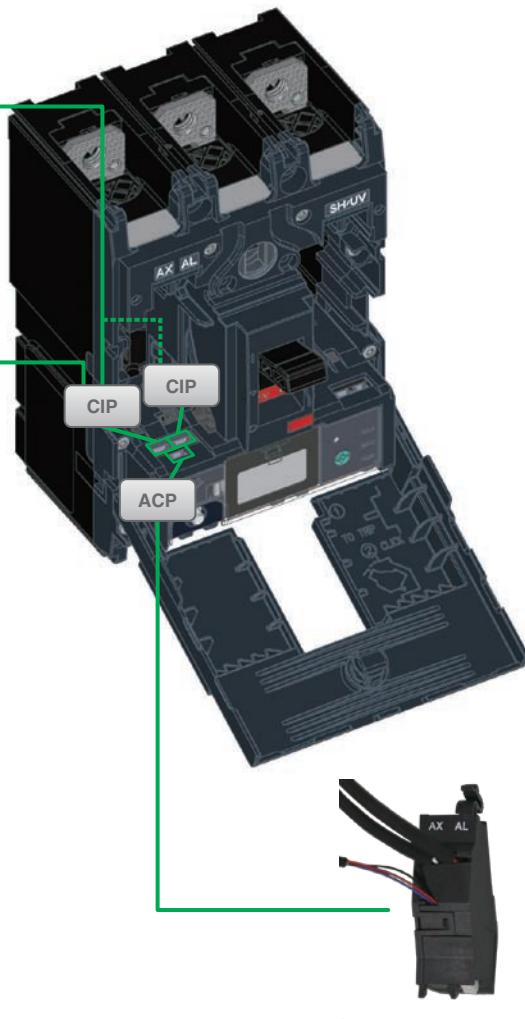

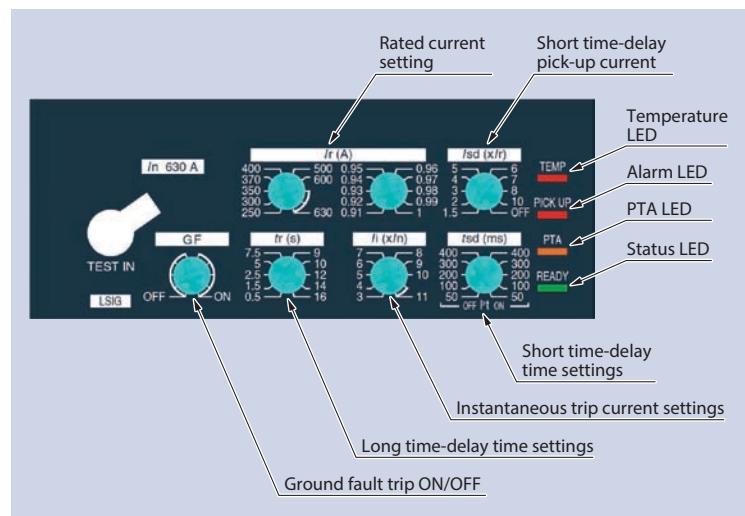

★Zone interlock function mitigates circuit damage

If a short circuit or ground fault occurs in a selective coordinated circuit with short time-delay protection and ground fault protection, the circuit breaker in the immediate upstream of the accident spot can be protected by an instantaneous trip triggered as a result of deactivation of time delay settings, consequently alleviating thermal and mechanical damage to the circuit at the time of accidental short circuiting. Linkage can be established among smart circuit breakers ranging from 100AF to 630AF, as well as between the smart circuit breaker and the TemPower2 air circuit breaker.

100AF to 630AF, provide much improved user convenience.

Advanced standard series electronic circuit breakers

- ★ Protection settings of standard series can be adjusted using multiple dials in place of conventional two dials, enabling flexible configuration of protection to meet a wide variety of needs.
- ★ The pre-trip alarm function, which was optional for the previous series, is now available as a standard feature. With this, the load current can be constantly monitored.
- ★ Settings for long time-delay can be configured by conventional rated current adjustment; in addition, it can be set to 91% to 100% of the rated current, in 1% increments. This allows fine tuning to suit the load conditions to be applied.
- ★ Also equipped with a temperature self-monitoring function. When the temperature of the circuit board inside the over-current protective device exceeds 105°C, a LED lamp lights up in red to indicate an abnormal operating status of the breaker.

★ Versatile measurement functions

The following types of circuit information can be acquired. There is no need to install in-panel instruments and incidental connecting wires in the energy management system.

- Current • Voltage • Wattage • Watt-hour • Power factor
- Frequency • Total harmonic distortion • Demand current
- Demand wattage

★ Precision measurement

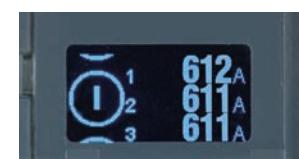

Rogowski coils are used for current sensors. Measurement is now possible with higher precision than previous series.

Reading errors complying with the international standard IEC 61557-12 were adopted to realize enhanced measurement accuracy: ±1% for electric current, ±0.5% for voltage, and ±2% for wattage.

This allows precise monitoring of energy use conditions.

★ Great visibility

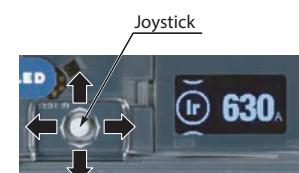

An OLED display panel is used for the display to indicate measurement values. Also, high visibility is ensured by use of symbols representing the items to be displayed.

★ Excellent operability

A joystick is used for switching display screens and configuring settings.

User-friendliness improved in comparison with push-button operation adopted in conventional models.

★ Status indication realized by smart AX/AL switch

With a special AX/AL switch installed, the number of times the auxiliary switch and alarm switch were activated can be indicated on the display of the circuit breaker, and it is also possible to transmit the activation count, along with the status of these switches, to the network including remote displays.

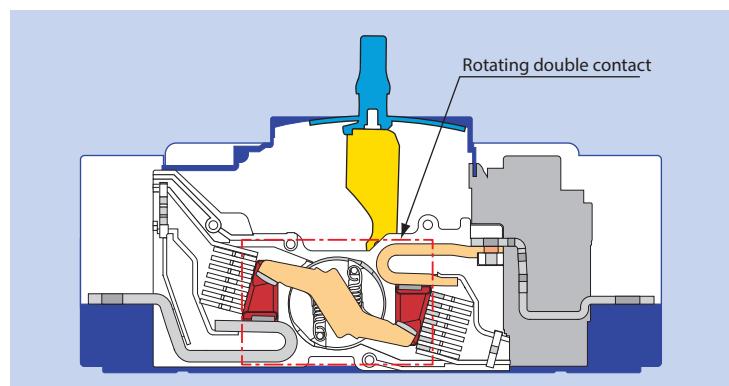

Hi-Performance with Hi-Technology

Rated breaking capacity improved for 100AF - 630AF models

	TemBreak	TemBreak PRO
125AF 160AF	 S125-GJ 415V AC $I_{cu}/I_{cs}=65\text{kA}/33\text{kA}$	 P160H 415V AC $I_{cu}/I_{cs}=70\text{kA}/50\text{kA}$
250AF	 S250-GJ 415V AC $I_{cu}/I_{cs}=65\text{kA}/36\text{kA}$	 P250H 415V AC $I_{cu}/I_{cs}=70\text{kA}/50\text{kA}$
400AF	 S400-PJ 415V AC $I_{cu}/I_{cs}=85\text{kA}/85\text{kA}$	 P400S 415V AC $I_{cu}/I_{cs}=110\text{kA}/110\text{kA}$
630AF 800AF	 S800-RJ/630A 415V AC $I_{cu}/I_{cs}=70\text{kA}/50\text{kA}$	 P630S 415V AC $I_{cu}/I_{cs}=110\text{kA}/110\text{kA}$

The 400AF/630AF models feature a pressure trip mechanism that leverages internal pressure generated at the time of a short-circuit trip, and a rotating double contact structure that has evolved from the world's first current-limiting circuit breaker technology developed by Terasaki. Owing to smooth contact separation realized by the rotating double throw contact, as well as speedy cut-off by the pressure trip mechanism, these new circuit breakers have excellent breaking performance:
 $I_{cu}/I_{cs}=110\text{kA}/110\text{kA}$ (415V AC).

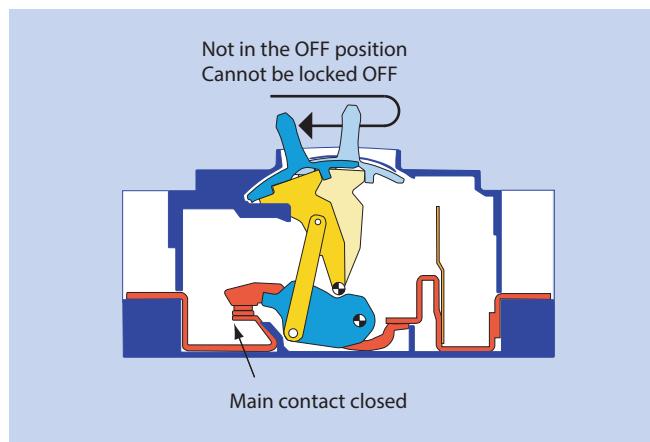

Safety inherited from *TemBreak2*

The safety-conscious functions and design features of the TemBreakPRO were taken over from the *TemBreak2* series.

Isolation capability

The isolation capability means that, as long as the main contact is closed, the toggle is not in the OFF position and cannot be locked at the OFF position.

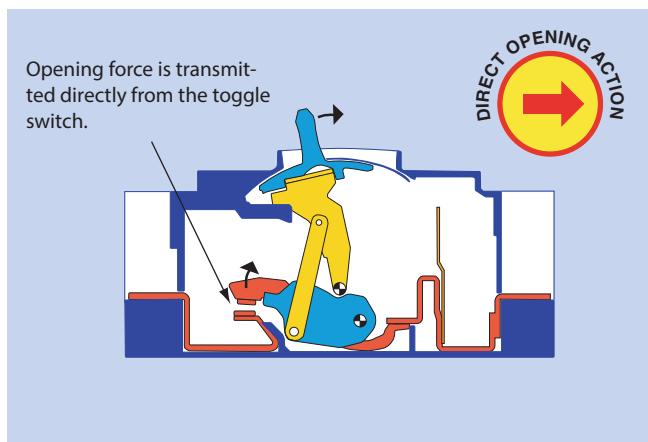

The toggle being in the OFF position hence shows the main contact is open and personnel are not exposed to electrical shock hazard when working in the load side.

Direct Opening Action

As well as being a spring-based switching mechanism, with the forced OFF mechanism, the main contact is moved directly by the operating force from the toggle at the time of OFF operation.

It can be used as an emergency stop switch for machines which comply with IEC60204-1. Even if the internal spring mechanism is damaged, the plug-in base can be turned OFF, meaning that it is safe.

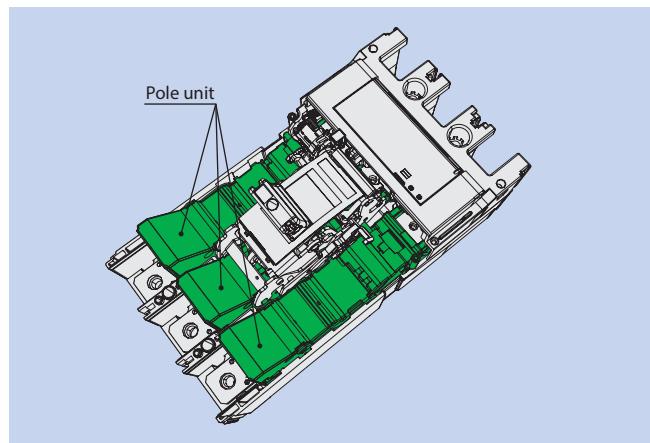

Enhanced Insulation

The risk of touching live parts has been minimized by design. If the toggle is broken by accident or misuse, no live part is exposed.

Moreover, 400AF and 630AF models adopted a pole unit structure comprising contacts and arc chambers housed in plastic cases and allocated to each pole.

This helped improve insulation performance between poles.

Easy-to-understand status indication

The indicator clearly shows Red when the circuit breaker is ON and Green when the breaker is OFF. No color indication means the device has tripped.

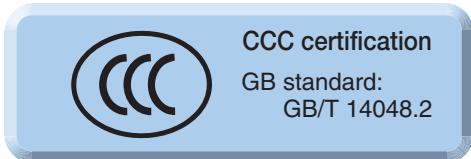

This design prevents misperception of breaker status when seen from any angle, thus ensuring safety.

Global Standard

Obtained CCC certification

TemBreak PRO moulded case circuit breakers comply with GB standards and are CCC certified.

● CCC certification system

The Chinese government enforces compulsory product certification covering areas such as safety and EMC for products that are distributed in China. It is prohibited to ship products that have not obtained CCC certification within China, import them into China, or sell them. TemBreak PRO products comply with GB/T 14048.2, the Chinese national standard, which is the technical standard for the CCC certification system.

Obtained DEKRA certification

TemBreak PRO moulded case circuit breakers have obtained certification from DEKRA in Germany, an international certification body. We passed short circuit breaking test with DEKRA as a witness. DEKRA certification is recognised for its reliability not only in Europe but all over the world.

● KEMA, the Dutch standards association for electrical equipment, came under the umbrella of DEKRA in 2011. As such, the former KEMA certification is now called DEKRA certification.

Conforms to the RoHS2 Directive

We use environmentally-friendly materials and do not use harmful substances.

We use recyclable thermoplastic resin for plastic parts and indicate the names of the materials used on the main plastic parts.
(Excludes some models)

• Indication of material name

Notes:

● : Standard. This configuration used unless otherwise specified.

○ : Optional standard. Specify when ordering.

● : "yes" or "available". — : "no" or "not available".

① : Supplied as standard.

⑧ : With AC UVT, the UVT controller is externally mounted.

⑯ : Mechanical interlocks cannot be applied to draw-out type (DR).

⑩ : Please use upstream breaker for overcurrent protection. Rated conditional short-circuit current [I_{cc}] will be the same as Rated short-circuit breaking capacity of upstream breaker.

⑪ : Fixed depth, not adjustable.

Selection

Moulded Case Circuit Breakers

1 Selection of circuit breakers for selectivity coordination

The following table shows possible combinations of main circuit breakers and branch circuit breakers capable of selectivity coordination with the main circuit breakers as well as the breaking capacity I_{cu} sym. (kA) of each combination at the points where the branch circuit breaker is installed.

Breaker combination table for selectivity coordination for 415V AC circuit

Notes:

TM: Thermal type. ELE: Electronic type.

- All ACB's have I_t set at NON, MCR ON.
- Assuming ACB time settings are greater than MCCB.
- The above table is in accordance with IEC 60947-2, Annex A.
- External relay can be used - Contact Terasaki for further details.
- All values shown at 415V AC.

Notes:

A) Recommended circuit breaker size based on the following starting conditions:

Starting currents approx. $7.5 \cdot 8 \times$ motor FLC. Start time approx. 5 sec.

Premium efficiency motors include a current spike ranging 15 - 22 x FLC for 3 - 10ms, that will vary by motor make.

Motor Starters 132kW and above, Kit utilises separate 5P10-5A Current Transformers with CEP7-EE * Z overload.

* Overload relay separately mounted from contactor - 90 and 110kW starters, may use the CTKIT400A.

B) Other

1) CEP7-EE overload add-on modules are available for: Profibus, DeviceNet, Ethernet, Ground Fault, Remote reset, Jam protection, Thermistor protection.

Only one module can be fitted at any one time on a CEP7-EE overload.

C) Note

1) Set circuit breaker I_t to 1 ($= I_n$), and Overload relay is set to motor FLC.

* Overload relay separately mounted from contactor - 90 and 110kW starters, may use the CTKIT400A.

B) Other

1) 193-EE overload add-on modules are available for: Profibus, DeviceNet, Ethernet, Ground Fault, Remote reset, Jam protection, Thermistor protection.

Only one module can be fitted at any one time on a 193-EE overload.

C) Note

1) Set circuit breaker I_f to 1 ($= I_n$), and Overload relay is set to motor FLC.

Notes:

A) Recommended circuit breaker size based on the following starting conditions:

Starting currents approx. 7.5×8 x motor FLC. Start time approx. 5 sec.

Premium efficiency motors include a current spike ranging 15 - 22 x FLC for 3 - 10ms, that will vary by motor make.

Motor Starters 132kW and above, require external 5P10-5A Current Transformers.

B) E/L

- Int- Internal Ground Fault torroid in Sensing module – 500mA to 5 Amp

To use External toroid, and/or Thermistor protection, -GP42- Control module is required.

- Ext- External Ground Fault torroid via 193-CBCT – 20mA to 5 Amp

C) Other

2) 24D denotes 24V DC control voltage.

- # – Specify Contactor mount, or E3T / T for separate DIN mount, or P for Pass Thru

If Power and Voltage monitoring is required, change Sensing module to VIG versions.

D) Note

1) Set circuit breaker I_s to 1 (= I_n), and Overload relay is set to motor FLC.

Notes:

A) Recommended circuit breaker size based on the following starting conditions:

Starting currents approx. 7.5–8 x motor FLC. Start time approx. 5 sec.

Premium efficiency motors include a current spike ranging 15 - 22 x FLC for 3 - 10ms, that will vary by motor make.

Motor Starters 132kW and above, require external 5P10-5A Current Transformers.

B) E/L

– Int- Internal Ground Fault torroid in Sensing module – 500mA to 5 Amp

To use External toroid, and/or Thermistor protection, -GP42- Control module is required.

– Ext- External Ground Fault torroid via 193-CBCT – 20mA to 5 Amp

C) Other

2) 24D denotes 24V DC control voltage.

– # – Specify Contactor mount, or E3T / T for separate DIN mount, or P for Pass Thru

If Power and Voltage monitoring is required, change Sensing module to VIG versions.

D) Note

1) Set circuit breaker I_c to 1 (= I_n), and Overload relay is set to motor FLC.

TM: Thermal type ELE: Electronic type

Special Breakers

Moulded Case Circuit Breakers

1 High-Performance Electronic Smart Circuit Breaker (TPOU type OCR)

The TPOU-type high-performance electronic OCR has the functions of long time-delay trip, short time-delay trip, instantaneous trip, preferential trip alarm, ground fault trip, zone interlock, and HOT characteristics/COLD characteristic selection. Additionally, the built-in VT and CT measure the current, voltage, instantaneous power, integrated electric energy, and power factor of the electric circuit, and display them on the OLED display mounted on the front of the circuit breaker. For the setting values of each function, set the values displayed on the OLED display with the joystick.

■ Outer view

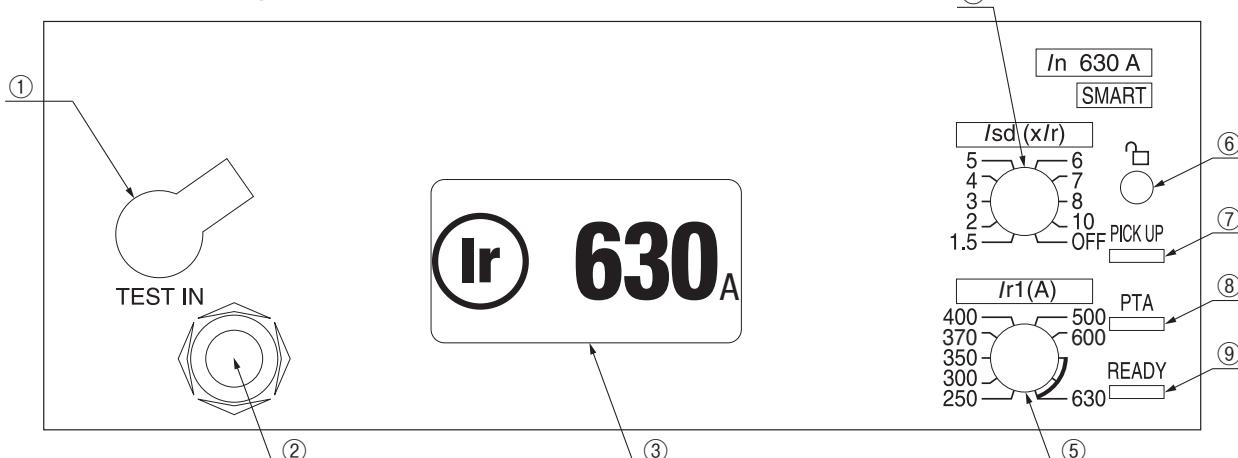

■ TPOU type OCR applicable model

Breaker type	Rated current (I_n) (A)
P160F, P160N, P160H	40, 100, 160
P250F, P250N, P250H	40, 100, 160, 250
P400F, P400N, P400H, P400S	250, 400
P630F, P630N, P630H, P630S	630

- The display of the smart circuit breaker uses an OLED. As a result, the viewing angle is much wider than that of LCD, it is self-luminous and has excellent visibility. The display unit can be easily replaced by the customer.
- Since the OCR uses an r.m.s. value control method, the effects of harmonics do not cause any malfunction.
- Smart circuit breakers can be reversely connected.

■ Example of TPOU type OCR for P630N

(1) A terminal for connecting the OCR checker.

(2) Joystick for OCR operation

Use the joystick to select and confirm the various setting values shown on the display.

(3) OLED display

The OCR display uses an ultra-high definition built-in OLED display, so no backlight is required and the brightness can be adjusted. The display can be rotated by 90 degrees according to the installation position of the circuit breaker main unit.

Symbols are shown on the display to enable easy and clear operation.

(4) Short time-delay trip set current dial

You can fine-tune between the selected magnification and magnification +0.5 one level below in additional 0.5× steps on the display.

(5) Rated current setting dial

You can fine-tune between the selected current value and the current value one level below in additional 1A steps on the display.

(6) Set value lock release button

You can unlock this button to change the setting on the display.

(7) Alarm LED

Lights red during long time-delay pickup.

(8) PTA LED

The preferential trip alarm flashes orange during pickup and lights when it is output.

(9) Status LED

Lights green when the OCR is operating normally. Flashes orange if there is an error.

■ Measurement/monitoring of electric circuits and preventive maintenance with TPOU type OCR

The TPOU-type OCR human-machine interface flexibly responds to various user system requirements such as various measurement and status display, system and network protection, and alarm management.

• Data transmission of various types of information

Compatible with Modbus open network to connect the communication module, it transmits all kinds of data such as circuit status, circuit breaker settings, measurement data and event history information.

• Custom alarm

OCR can make a wide range of measurements such as voltage, current, power, electric energy, power factor, frequency, demand current, demand power, total harmonic distortion, trip history, and alarm history. The user can set an alarm for any 12 items among these measurements.

• Preventive maintenance with temperature monitoring

If the board temperature inside the circuit breaker exceeds 105°C, the “TEMP” symbol is shown on the display to indicate the abnormal. Please use this function for preventive maintenance to prevent problems caused by contact and terminal connections. Since the OCR requires high reliability, we use CPUs and ICs with an upper limit operating ambient temperature above +105°C.

• Zone interlock reduces damage to electric circuits

By setting a zone interlock between TemBreak PRO circuit breakers equipped with OCR, it is possible to trip the upstream circuit breaker closest to the accident location in the shortest time without waiting for the short time-delay setting time. This means that in the event of a short circuit accident, thermal and mechanical damage to the electric circuit can be reduced. Up to 7 circuit breakers can be linked between upstream and downstream breakers.

However, the number of upstream circuit breaker is multiple, control power supply is needed for all of them.

Zone-selective interlocks are possible not only between circuit breakers but also between TemPower2 air circuit breakers. Ground fault protection coordination is also possible with zone selective interlocks.

• Reliable maintenance work with built-in clock function

The OCR has two built-in clock functions: a user-set clock and a clock that measures the cumulative operating time of the OCR. The user-set clock allows the user to set the date and time as desired. The clock that measures the cumulative operating time of the OCR calculates the cumulative operating time that the OCR has actually been energized.

In the event of power loss, the events prior to the power loss are stored in memory as a time-stamped event history, for both the user-set clock and the clock that measures the cumulative operating time of the OCR.

Using these clock functions, reliable maintenance work can be performed.

• Uses multi-feed control power supply

A multi-feed control power supply is adopted. In case Smart circuit breakers are connected with communication module and remote display, if the control power is supplied to the communication module, there is no need to additionally supply the control power to the OCR or the remort display.

• Supports hot start

For long time-delay trip, you can switch between cold start and hot start. Hot start can function even without a control power supply.

TPPHQTT370H (For PS125,250)	
TPPHQTT470H (For PS/PH400,630)	
TPPHQTT500H	
TPSS00N	
TPSS00MXLSW	
TPSS00MXLRW	

* : See page 4-18 for the specifications of the AX/AL switch.

Note ①: Not compatible with 3-phase 4-wire systems. Select the NSP cable (TPPHQTT500H) if using a 3 pole smart circuit breaker for 3-phase 4-wire power distribution.

Note ②: Control power supply is not required.

Note ③: By supplying the control power of 24 V DC to the OCR with the optional cable (order type TPPHQTT140H), the value is displayed even when the circuit breaker is OFF and when the internal power supply is not established due to the small main circuit current.

If a communication module supplied with control power is connected to the OCR, that control power is supplied to the OCR. This means that there is no need to supply additional control power to the OCR.

OCR control power supply
Voltage : 24V DC ± 30%
Consumption current : 60mA

Note ④: You can select not only general cold start characteristics, but also hot start characteristics that take into consideration the thermal characteristics of load equipment such as electric wires and electric motors.

Note ⑤: An optional cable (order type TPPHQTT150H) is required for the input/output of the zone interlock. For PS125-NE/PE circuit breakers, the zone interlock is output only.

Note ⑥: By connecting the optional cable (order type TPPHQTT130H), data can be contact output from only one of the following items.

- System (OCR operation) error alarm
- OCR abnormal temperature alarm
- Preferential trip alarm PTA
- 1 output of 12 custom alarms

Contact rating
Non-contact output 1a
Contact capacity 24V AC/DC 100mA

Note ⑦ : Phase voltage is displayed only for 4-pole circuit breakers.

Note ⑧ : Supply 24 V DC control power to the control power terminal of the communication module. The control power supplied to the communication module is also supplied to the OCR.

Note ⑨ : Supply the 24 V DC control power to the OCR with the optional cable (order type TPPHQTT140H). Then, connect the optional cable (order type TPPHQTT330H to 470H) between the OCR and the remort display. This allows the OCR to supply control power to the remort display. However, if a communication module supplied with control power is connected to the OCR, it is not necessary to supply control power to the OCR.

Note ⑩ : ON/OFF information for auxiliary switch 1c and alarm switch 1c is read by the OCR and output to the remort display and communication module.

Alarm history	Alarm cause	—	○	○	○

Note: Electric energy, trip history, and alarm history are stored in the non-volatile memory when a trip occurs.

■ Specifications of communication module

The communication module TPCM can communicate all the data recorded by the OCR to the Modbus RTU monitoring system.

Modbus parameters are adjusted with the dial on the whole surface of the communication module.

The communication module can be mounted on the side of the circuit breaker by using the included support.

Item	Modbus specifications
Transmission signal	RS-485
Communication method	2-wire half duplex
Topology	Multi-drop bus connection
Transmission speed	Max. 38.4kbps
Transmission distance	Max. 1.2km (at 38.4kbps)
Data type	Modbus-RTU
Maximum number of nodes	1~99

■ AX/AL switch specifications

The TPSS00N AX/AL switch is connected to the ACP (Auxiliary Connection Port) of the OCR and the OCR displays the ON/OFF status of the AX/AL switch. The OCR also displays the number of ON/OFF operations during OCR energization.

The TPSS00MXLSW standard AX/AL switch adds a standard contact output to the above TPSS00N AX/AL switch.

The TPSS00MXLRW microload AX/AL switch adds a contact output for microloads to the above TPSS00N AX/AL switch.

The table below shows the contact ratings of the TPSS00MXLSW standard switch and the TPSS00MXLRW microload switch.

• TPSS00MXLSW standard switch contact output

Voltage (V)	AC			DC			Minimum load	
	Current (A)			Voltage (V)	Current (A)			
	Resistive load	Inductive load power factor 0.7 or more	Inductive load power factor 0.3 or more		Resistive load	Inductive load time constant 15ms or less		
250	3	3	1	125	0.4	0.02	30mA at 10V DC	
125	3	3	2	30	3	0.3		

• TPSS00MXLRW microload switch contact output

Voltage (V)	DC		Minimum load	
	Current (A)			
	Resistive load	Inductive load time constant 15ms or less		
30	0.1	1mA at 5V DC		

■ Remote display

The remote display TVP00 can be easily mounted to a panel, etc. of a switchboard by connecting it from the OCR with a single cable. The backlit LCD display has good visibility even in dark places. Display is possible in 8 languages: Japanese, English, French, German, Italian, Spanish, Portuguese, and Chinese.

Display items	Settings/change items
Circuit breaker protection setting value	Circuit breaker protection setting value
Measured value of electric circuit	Measured value parameters
Alarm information	Output contact parameters
Event history information	Alarm management setting values
Breaker identification information	

■ TTP00 type OCR checker

The OCR checker is to easily check the OCR's long time-delay, short time-delay, instantaneous trip, ground fault trip and preferential trip alarm functions in the field. See section 8 for details.

■ Overcurrent tripping characteristics

Rated current (I_n) : 40A, 100A, 160A

Rated current settings (A) : (I_r) ①	In the case of (I_n)=40 A Adjustable to (I_r) ₁ (A)=16, 18, 20, 22, 25, 28, 32, 34, 37, 40 In the case of (I_n)=100 A Adjustable to (I_r) ₁ (A)=40, 45, 50, 57, 63, 72, 80, 87, 93, 100 In the case of (I_n)=160 A Adjustable to (I_r) ₁ (A)=63, 70, 80, 90, 100, 110, 125, 135, 150, 160 Select (I_r) ₁ with the dial. Adjustable in 1 A steps between the selected (I_r) ₁ and the level below (I_r) ₁ . However, the minimum is 16 A when (I_n)=40A, 40A when (I_n)=100A and 63 A when (I_n)=160 A. ②
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at (I_r) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	(I_r) \times 1.5 to 10 (0.5 steps) or OFF ⑥ Current setting tolerance within \pm 10%
Short time-delay time settings (ms) : (t_{sd})	50, 100, 200, 300, 400 adjustable Ramp characteristics I ² t: ON or OFF However, definite time-delay characteristics with (I_r) \times 10 or more When (t_{sd}) = 50ms Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100ms to 400ms Time-delay setting tolerance -20 ms or more +50 ms or less
Instantaneous trip pick-up current (A) : (I_i)	When (I_n) = 40A or 100A, (I_n) \times 3 to 15 (0.5 step) When (I_n) = 160A, (I_n) \times 3 to 11 (0.5 step) Current setting tolerance within \pm 15%
N-phase protection pick-up current ⑦ (A) : (I_N)	For 4P (I_r) \times 50%, 100% or OFF ⑧
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip ⑨
Ground fault trip pick-up current (A) : (I_g)	3P for 3 ϕ 3W, 4P for 3 ϕ 4W (3P 3 ϕ 4W not supported ④) When (I_n) = 40A, (I_n) \times 40% to 100% (5% steps) or OFF When (I_n) = 100A or 160A, (I_n) \times 20% to 100% (5% steps) or OFF Current setting tolerance within \pm 10%
Ground fault trip time settings (ms) : (t_g)	50, 100, 200, 300, 400, 500 adjustable Ramp characteristics I ² t: ON or OFF ⑤ However, definite time-delay characteristics with (I_n) \times 1 or more Time-delay setting tolerance -20 ms or more +50 ms or less
Preferential trip alarm pick-up current (A) : (I_p)	(I_r) \times 60% to 80% to 95% (5% steps) or OFF Current setting tolerance within \pm 10%
Preferential trip alarm time settings (s) : (t_p)	(t_r) \times 5% to 50% to 80% (5% steps) at (I_p) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
ZSI Zone interlock	STD Short time-delay ON or OFF
	GF Ground fault trip ON or OFF
Start operating characteristics	Hot start/cold start (selectable)

Rated current (I_n) : 40A, 100A, 160A, 250A

Rated current settings (A) : (I_r) ①	In the case of (I_n)=40 A Adjustable to (I_r) ₁ (A)=16, 18, 20, 22, 25, 28, 32, 34, 37, 40 In the case of (I_n)=100 A Adjustable to (I_r) ₁ (A)=40, 45, 50, 57, 63, 72, 80, 87, 93, 100 In the case of (I_n)=160 A Adjustable to (I_r) ₁ (A)=63, 70, 80, 90, 100, 110, 125, 135, 150, 160 In the case of (I_n)=250 A Adjustable to (I_r) ₁ (A)=100, 110, 125, 140, 160, 180, 200, 225, 250 Select (I_r) ₁ with the dial. Adjustable in 1 A steps between the selected (I_r) ₁ and the level below (I_r) ₁ . However, the minimum is 16 A when (I_n)=40A, 40A when (I_n)=100A, 63A when (I_n)=160A and 100A when (I_n)=250A. ③
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at (I_r) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	(I_r) \times 1.5 to 10 (0.5 steps) or OFF ⑥ Current setting tolerance within \pm 10%
Short time-delay time settings (ms) : (t_{sd})	50, 100, 200, 300, 400 adjustable Ramp characteristics I ² t: ON or OFF However, definite time-delay characteristics with (I_r) \times 10 or more When (t_{sd}) = 50ms Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100ms to 400ms Time-delay setting tolerance -20 ms or more +50 ms or less
Instantaneous trip pick-up current (A) : (I_i)	When (I_n) = 40A or 100A, (I_n) \times 3 to 15 (0.5 step) When (I_n) = 160A or 250A, (I_n) \times 3 to 11 (0.5 step) Current setting tolerance within \pm 15%
N-phase protection pick-up current ⑦ (A) : (I_N)	For 4P (I_r) \times 50%, 100% or OFF ⑧
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip ⑨
Ground fault trip pick-up current (A) : (I_g)	3P for 3 ϕ 3W, 4P for 3 ϕ 4W (3P 3 ϕ 4W not supported ④) When (I_n) = 40A, (I_n) \times 40% to 100% (5% steps) or OFF When (I_n) = 100A, 160A or 250A, (I_n) \times 20% to 100% (5% steps) or OFF Current setting tolerance within \pm 10%
Ground fault trip time settings (ms) : (t_g)	50, 100, 200, 300, 400, 500 adjustable Ramp characteristics I ² t: ON or OFF ⑤ However, definite time-delay characteristics with (I_n) \times 1 or more Time-delay setting tolerance -20 ms or more +50 ms or less
Preferential trip alarm pick-up current (A) : (I_p)	(I_r) \times 60% to 80% to 95% (5% steps) or OFF Current setting tolerance within \pm 10%
Preferential trip alarm time settings (s) : (t_p)	(t_r) \times 5% to 50% to 80% (5% steps) at (I_p) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
ZSI Zone interlock	STD Short time-delay ON or OFF
	GF Ground fault trip ON or OFF
Start operating characteristics	Hot start/cold start (selectable)

Remarks: If not otherwise specified, the product will be delivered with the underlined standard setting values.

Notes:

- ①: Trip with a pickup current value exceeding $I_r \times 1.05$ and 1.2 or less.
- ②: In the case of (I_n)=40A, Ir is adjustable in 1A steps between 16, 17 to 18, 19 to 20, 21 to 22, 23 to 25, 26 to 28, 29 to 32, 33 to 34, 35 to 37, 38 to 40.
In the case of (I_n)=100A, Ir is adjustable in 1A steps between 40, 41 to 45, 46 to 50, 51 to 57, 58 to 63, 64 to 72, 73 to 80, 81 to 87, 88 to 93, 94 to 100.
In the case of (I_n)=160A, Ir is adjustable in 1A steps between 63, 64 to 70, 71 to 80, 81 to 90, 91 to 100, 101 to 110, 111 to 125, 126 to 135, 136 to 150, 151 to 160.
- ③: In the case of (I_n)=40A, Ir is adjustable in 1A steps between 16, 17 to 18, 19 to 20, 21 to 22, 23 to 25, 26 to 28, 29 to 32, 33 to 34, 35 to 37, 38 to 40.
In the case of (I_n)=100A, Ir is adjustable in 1A steps between 40, 41 to 45, 46 to 50, 51 to 57, 58 to 63, 64 to 72, 73 to 80, 81 to 87, 88 to 93, 94 to 100.
In the case of (I_n)=160A, Ir is adjustable in 1A steps between 63, 64 to 70, 71 to 80, 81 to 90, 91 to 100, 101 to 110, 111 to 125, 126 to 135, 136 to 150, 151 to 160.
In the case of (I_n)=250A, Ir is adjustable in 1A steps between 100, 101 to 110, 111 to 125, 126 to 140, 141 to 160, 161 to 180, 181 to 200, 201 to 225, 226 to 250.
- ④: A 3-pole circuit breaker cannot be used with a 3-phase 4-wire system.
- ⑤: The ramp characteristics can be switched ON/OFF separately from the short time-delay trip.
- ⑥: Adjustable to $I_{sd}=I_r \times 10 - 9.5 - 9 - 8.5 - 8 - 7.5 - 7 - 6.5 - 6 - 5.5 - 5 - 4.5 - 4 - 3.5 - 3 - 2.5 - 2 - 1.5$.
- ⑦: Trip with a pickup current value exceeding $I_N \times 1.05$ and 1.2 or less.
- ⑧: There is no N-phase protection function for 3P. Always set it to OFF.
- ⑨: The ON/OFF of the ramp characteristics conform to the short time-delay trip settings.

Rated current (I_n) : 250A, 400A

Rated current settings (A) : (I_r) ①	In the case of (I_n)=250 A Adjustable to (I_r1)(A)=100, 110, 125, 140, 160, 180, 200, 225, 250 In the case of (I_n)=400 A Adjustable to (I_r1)(A)=160, 180, 200, 225, 250, 300, 350, 370, 400 Select (I_r1) with the dial. Adjustable in 1 A steps between the selected (I_r1) and the level below (I_r1). However, the minimum is 100 A when (I_n)=250A and 160A when (I_n)=400A. ⑩
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at (I_r) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	(I_r) \times 1.5, 2, 3, 4, 5, 6, 7, 8, 10 or OFF Select the magnification with the setting dial. You can adjust between the selected magnification and magnification +0.5 one level below in additional 0.5 \times steps on the display. ⑪ Current setting tolerance within \pm 10%
Short time-delay time settings (ms) : (t_{sd})	50, <u>100</u> , 200, 300, 400 adjustable Ramp characteristics I ² t: ON or OFF However, definite time-delay characteristics with (I_r) \times 10 or more When (t_{sd}) = 50ms Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100ms to 400ms Time-delay setting tolerance -20 ms or more +50 ms or less
Instantaneous trip pick-up current (A) : (I_i)	(I_n) \times 3 to <u>12</u> (0.5 steps) Current setting tolerance within \pm 15%
N-phase protection pick-up current ⑦ (A) : (I_N)	For 4P (I_r) \times 50%, <u>100%</u> or OFF ⑧
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip ⑨
Ground fault trip pick-up current (A) : (I_g)	3P for 3 \varnothing 3W, 4P for 3 \varnothing 4W (3P 3 \varnothing 4W not supported ③) (I_n) \times 20% to 100% (5% steps) or OFF Current setting tolerance within \pm 10%
Ground fault trip time settings (ms) : (t_g)	50, 100, 200, 300, 400, 500 adjustable Ramp characteristics I ² t: ON or OFF ④ However, definite time-delay characteristics with (I_n) \times 1 or more Time-delay setting tolerance -20 ms or more +50 ms or less
Preferential trip alarm pick-up current (A) : (I_p)	(I_r) \times 60% to 80% to 95% (5% steps) or OFF Current setting tolerance within \pm 10%
Preferential trip alarm time settings (s) : (t_p)	(I_r) \times 5% to 50% to 80% (5% steps) at (I_p) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
ZSI Zone interlock	STD Short time-delay ON or <u>OFF</u> GF Ground fault trip ON or <u>OFF</u>
Start operating characteristics	Hot start/cold start (selectable)

Remarks: If not otherwise specified, the product will be delivered with the underlined standard setting values.

Notes:

- ①: Trip with a pickup current value exceeding $I_r \times 1.05$ and 1.2 or less.
- ③: A 3-pole circuit breaker cannot be used with a 3-phase 4-wire system.
- ④: The ramp characteristics can be switched ON/OFF separately from the short time-delay trip.
- ⑦: Trip with a pickup current value exceeding $I_N \times 1.05$ and 1.2 or less.
- ⑧: There is no N-phase protection function for 3P. Always set it to OFF.
- ⑨: The ON/OFF of the ramp characteristics conform to the short time-delay trip settings.
- ⑩: In the case of I_n =250A, I_r is adjustable in 1A steps between 100, 101 to 110, 111 to 125, 126 to 140, 141 to 160, 161 to 180, 181 to 200, 201 to 225, 226 to 250.
In the case of I_n =400A, I_r is adjustable in 1A steps between 160, 161 to 180, 181 to 200, 201 to 225, 226 to 250, 251 to 300, 301 to 350, 351 to 370, 371 to 400.
- ⑪: As an example
When the setting dial is set to $I_r \times 10$, on the display, $I_{sd}=I_r \times 10 - 9.5 - 9 - 8.5$ is adjustable.
When the setting dial is set to $I_r \times 8$, on the display, $I_{sd}=I_r \times 8 - 7.5$ is adjustable.
When the setting dial is set to $I_r \times 2$, on the display, $I_{sd}=I_r \times 2$ is fixed.
- ⑫: I_r is adjustable in 1A steps between 250, 251 to 300, 301 to 350, 351 to 370, 371 to 400, 401 to 500, 501 to 600, 601 to 630.

Rated current (I_n) : 630A

Rated current settings (A) : (I_r) ①	Adjustable to (I_r1)(A)=250, 300, 350, 370, 400, 500, 600, 630 Select (I_r1) with the dial. Adjustable in 1 A steps between the selected (I_r1) and the level below (I_r1). However, the minimum is 250 A. ⑫
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, <u>5</u> , 7.5, 9, 10, 12, 14, 16 adjustable at (I_r) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	(I_r) \times 1.5, 2, 3, 4, 5, 6, 7, 8, <u>10</u> or OFF Select the magnification with the setting dial. You can adjust between the selected magnification and magnification +0.5 one level below in additional 0.5 \times steps on the display. ⑪ Current setting tolerance within \pm 10%
Short time-delay time settings (ms) : (t_{sd})	50, <u>100</u> , 200, 300, 400 adjustable Ramp characteristics I ² t: ON or OFF However, definite time-delay characteristics with (I_r) \times 10 or more When (t_{sd}) = 50ms Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100ms to 400ms Time-delay setting tolerance -20 ms or more +50 ms or less
Instantaneous trip pick-up current (A) : (I_i)	(I_n) \times 3 to <u>12</u> (0.5 steps) Current setting tolerance within \pm 15%
N-phase protection pick-up current ⑦ (A) : (I_N)	For 4P (I_r) \times 50%, <u>100%</u> or OFF ⑧
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip ⑨
Ground fault trip pick-up current (A) : (I_g)	3P for 3 \varnothing 3W, 4P for 3 \varnothing 4W (3P 3 \varnothing 4W not supported ③) (I_n) \times 20% to 100% (5% steps) or OFF Current setting tolerance within \pm 10%
Ground fault trip time settings (ms) : (t_g)	50, 100, 200, 300, 400, 500 adjustable Ramp characteristics I ² t: ON or OFF ④ However, definite time-delay characteristics with (I_n) \times 1 or more Time-delay setting tolerance -20 ms or more +50 ms or less
Preferential trip alarm pick-up current (A) : (I_p)	(I_r) \times 60% to 80% to 95% (5% steps) or OFF Current setting tolerance within \pm 10%
Preferential trip alarm time settings (s) : (t_p)	(I_r) \times 5% to 50% to 80% (5% steps) at (I_p) \times 600% Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
ZSI Zone interlock	STD Short time-delay ON or <u>OFF</u> GF Ground fault trip ON or <u>OFF</u>

Special Breakers

Moulded Case Circuit Breakers

2 High-Performance Electronic Circuit Breaker (XOW type OCR)

The XOW type high-performance electronic OCR measures the electric circuit current, voltage, instantaneous power, integrated electric energy, and power factor using the built-in VT and CT and displays them on the LCD mounted on the front of the circuit breaker. Also, it supports Modbus open network and transmits these measurement data and accident history information as data.

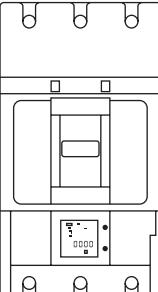

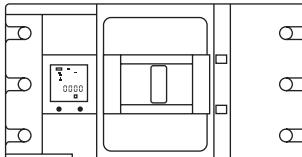

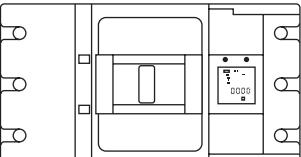

■ Appearance

- The LCD window provides the phase currents, line voltages (and their maximum values), power factor, electrical power and electrical energy. It can also provide the 1st to 19th harmonic currents for each phase.
- When a fault occurs, the cause of the fault and the fault current are indicated on the LCD. Data in memory is stored even if the power is lost. You can view event or fault logs after the power is restored.
- The breaker is available in three LCD orientations corresponding to the installation orientations of the breaker.

The LCD window is equal to the handle frame in width; the panel cutout can be made easily.

Vertical (move the handle up to ON) (Standard orientation)	Horizontal (move the handle right to ON)	Horizontal (move the handle left to ON)
		

If the breaker is installed in a horizontal orientation, please specify "Horizontal (move the handle right to ON)" or "Horizontal (move the handle left to ON)" when ordering. Otherwise the standard orientation "Vertical (move the handle up to ON)" will apply.

① : For S1000, (0.5-1.25-2.5-5-10-15-16)sec.

② : For S1000, $[I_n] \times (1-1.5-2-2.5-3-4-6-NON)$.

③ : For S1000, 800% or more of $[I_n]$.

④ : The max. pick-up current is set to 1300% $\times [I_{CT}]$ for H400 and L400, 1000% $\times [I_{CT}]$ for S1000, 1200% $\times [I_{CT}]$ for S800, H800 and L800.

⑤ : When the short time delay trip function has been set to NON, the instantaneous trip function cannot be set to NON. When the instantaneous trip function has been set to NON, the short time delay trip function cannot be set to NON.

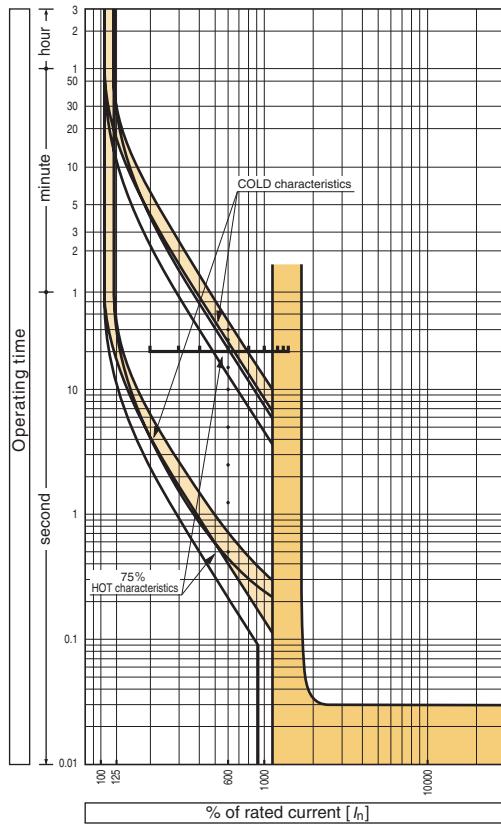

⑥ : Selecting "OFF" disables protective functions.

⑦ : GF is not available when In is 250A or less.

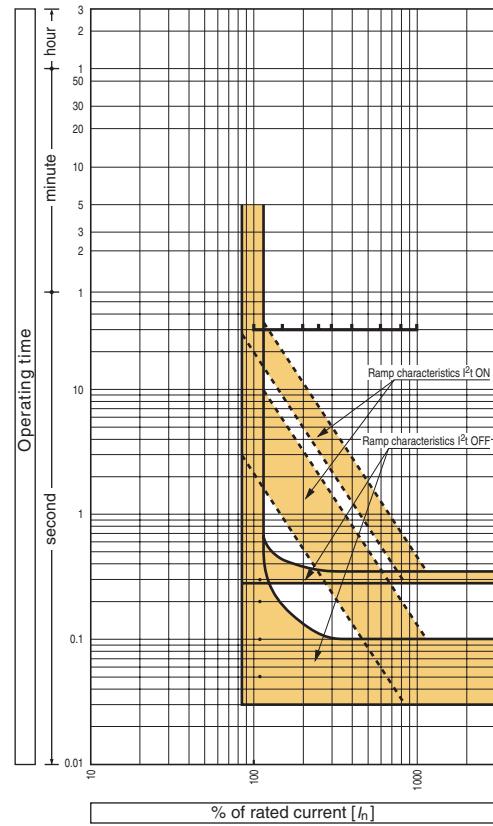

Unless otherwise specified when ordering, the settings will default to those underlined in the table above.

■ Operating characteristic curve

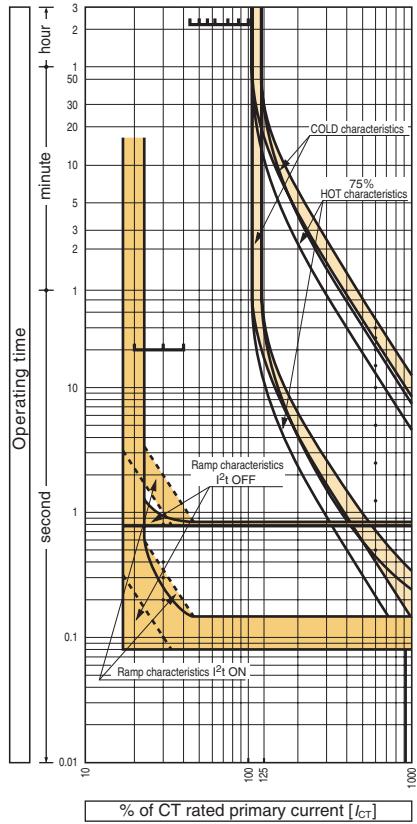

Long time-delay trip, instantaneous trip characteristics

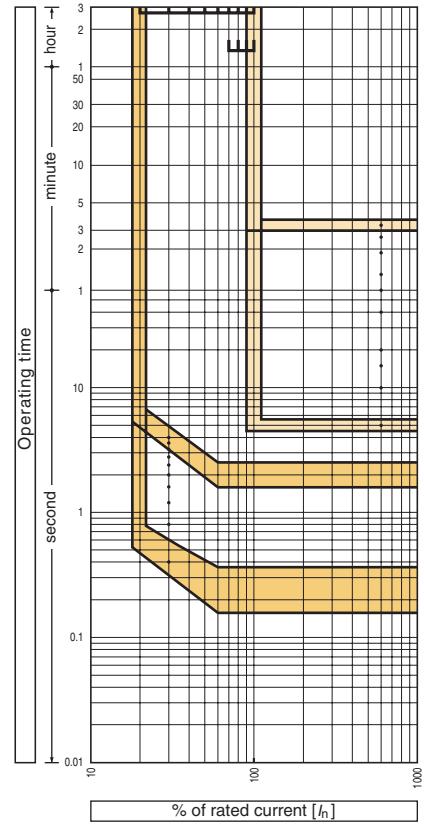

Short time-delay trip characteristics

N-phase protection, ground fault trip characteristics

Phase rotation protection, preferential trip alarm characteristics

Special Breakers

Moulded Case Circuit Breakers

2 High-Performance Electronic Circuit Breaker (XOW type OCR)

XOW type OCR controller

The XOW type electronic OCR requires a control power supply and an XOW type OCR controller (supplied by Terasaki). When ordering, please specify whether you would like the OCR controller to be mounted on the breaker or separate.

Note ① : When the OCR controller is mounted on the breaker, the shunt trip device/undervoltage trip device with lead wire terminal block cannot be used.

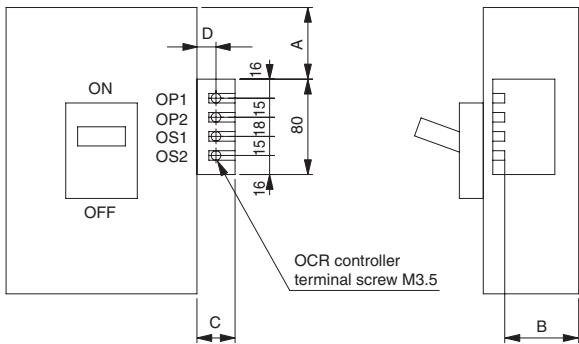

OCR controller specifications

Control power supply (rated voltage)	100 to 120V AC or 200 to 240V AC
VA consumption	2VA
Note ②	

Note ② : The allowable voltage range of the control power supply is 85 to 110% of the rated voltage. When ordering, please specify the rated voltage.

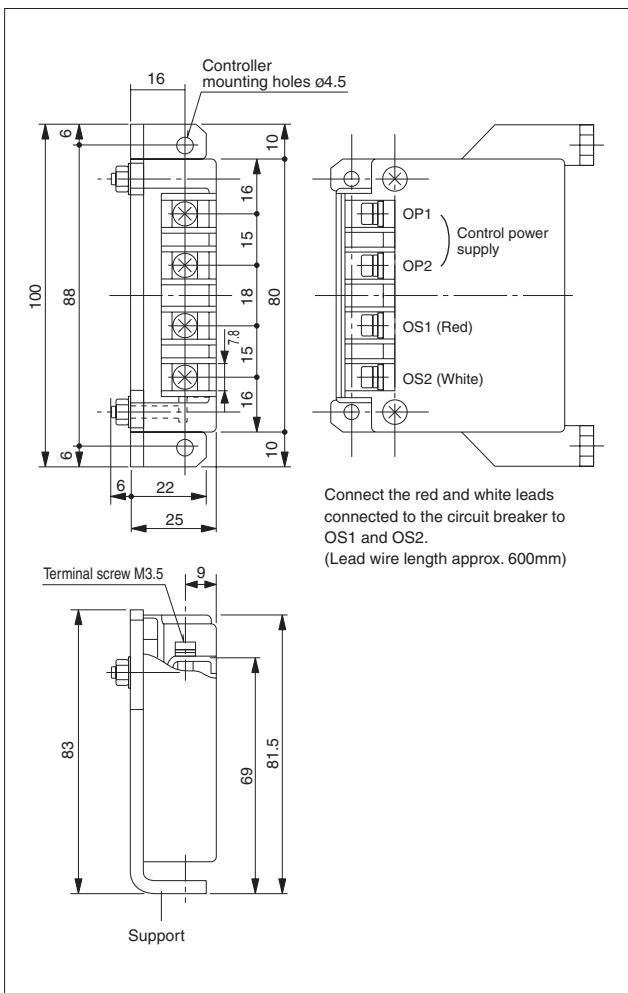

OCR controller breaker mounting position/terminal arrangement diagram

Applicable circuit breaker	A(mm)	B(mm)	C(mm)	D(mm)
S400	3P、4P	80	74	25.2
H400, L400	3P、4P	80	111	25.2
S630, S800, S1000	3P、4P	71.5	74	25.2
H630, L630 H800, L800	3P、4P	71.5	111	25.2
				16.2

Note 1): Terminal screw tightening torque M3.5 ... 0.88 – 1.18N·m
2): Connectable wire 2.0mm² (max.)

Remarks: Normally the plug-in base should be ordered at the same time as the breaker body. However, please order it if you will connect the plug-in base in advance.

Note: ① If internal accessories are fitted in the circuit breaker, auxiliary circuit terminals for IP20 are required. Please specify "IP20 applied product" when ordering the circuit breaker body.

② Electronic type is not available.

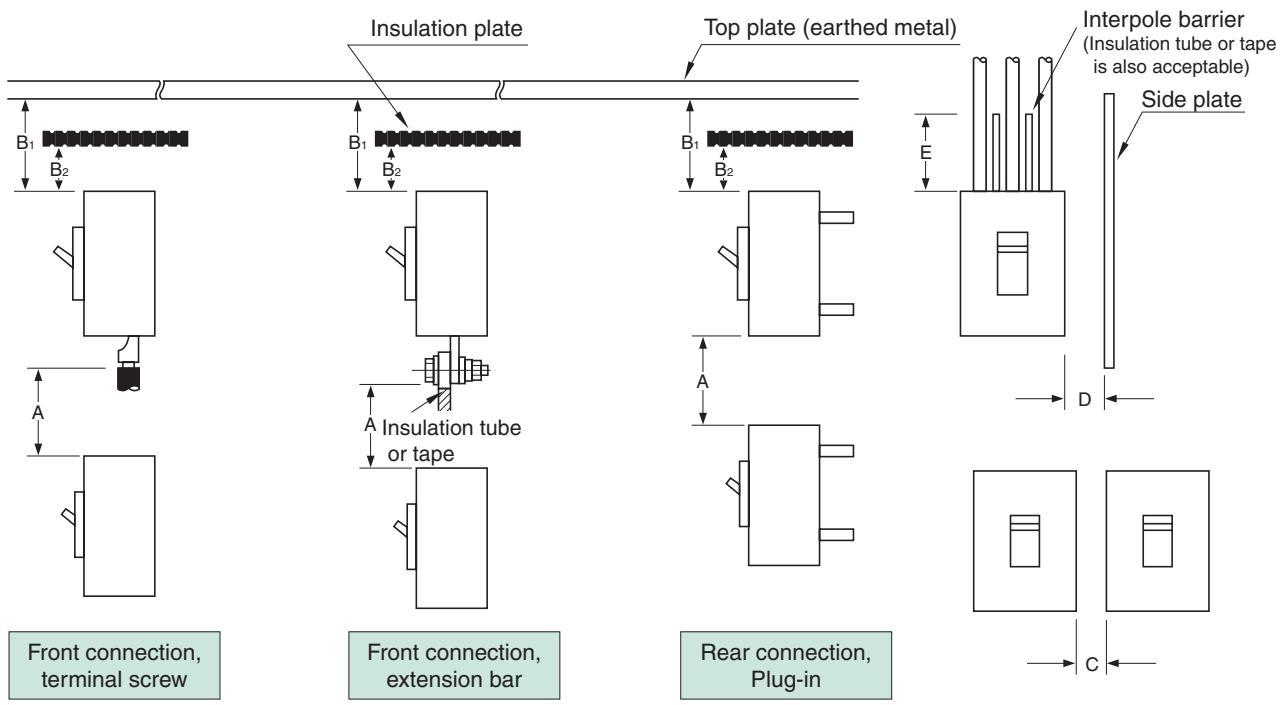

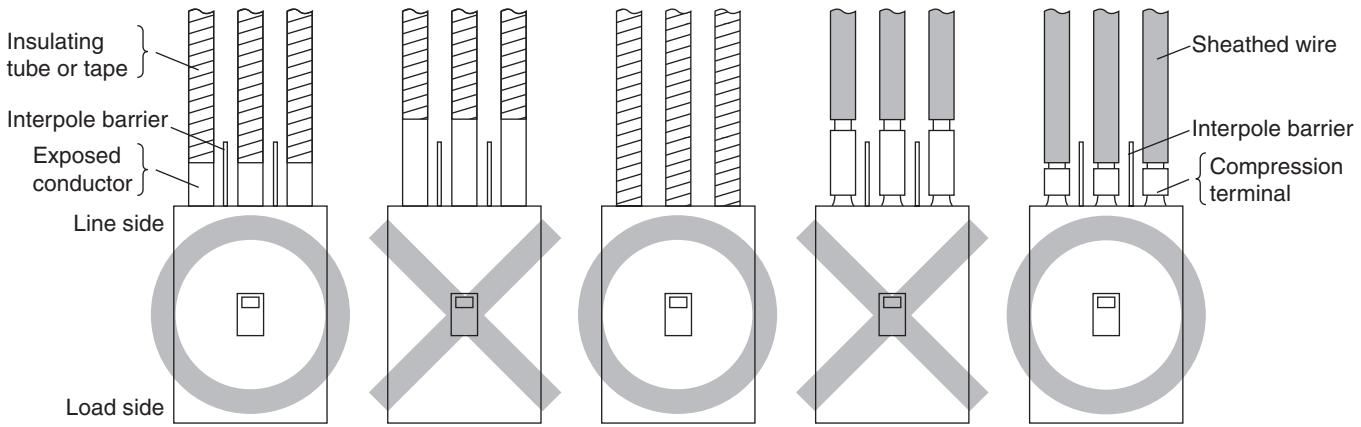

5

Mounting and Connection

Moulded Case Circuit Breakers

2 Insulation distance from the line side

The insulation distance between the breaker and earthed metal parts and insulators shown in the table on the next page must be maintained to prevent arcing faults occurring due to conductive ionised gas. In addition, completely cover exposed conductors, to their roots at the breaker or to below the height protected by interpole barriers, on the line side of the breaker using insulation tube or tape, in order to provide positive protection against short circuit or ground fault due to metal chipping, surge voltage, dust particles or salt. Be sure to install the interpole barriers supplied with the breaker.

A : Distance from lower breaker to exposed live part of upper breaker terminal (front connection) or distance from lower breaker to end face of upper breaker (rear connection, plug-in).

B₁ : Distance from end face of breaker to top plate.

B₂ : Distance from end face of breaker to insulation plate.

C : Gap between breakers.

D : Distance from side of breaker to side plate (earthed metal).

E : Dimension of insulation over exposed conductors.

Insulation distance, mm (415V AC or less) Note ①

Series	Moulded Case Circuit Breakers	A Breaker upper and lower gap Note ②	B1 Bare grounded metal plate	B2 Insulating plate, coated plate	C	D	E Note ④

	L800-PE	200 Note ⑤	200	160	Possible to set close Note ③	100	—

Notes:

- ① : Required to allow free and uninterrupted flow of arc gases. Ensure additional clearance or insulation distance if required to perform wiring, barrier installation or electrical work or to meet the need for more insulation distance between bare live parts and grounded metal members in a switchboard or the like.
- ② : The figures are for lower breakers.
- ③ : When internal accessories are mounted, it cannot be closely fitted because the lead wires can not be pulled out to the load side.
- ④ : For front connection breakers, insulate all exposed conductors of the line side until the breaker end. If interpole barriers are packed, be sure to use the barriers; moreover, insulate all exposed conductors by insulating tape or the like so that the tape overlaps with the barriers.
- ⑤ : Arc gas is discharged to the line side and load side. Please be careful when arranging within the board.
- ⑥ : If using extension bars (optional), ensure the insulation distance specified for the application.

Moulded Case Circuit Breakers

1 OCR for electronic breakers

1. TPOT type and TPOP type electronic OCR

(1) Overcurrent trip characteristics

■ TPOT type and TPOP type OCR applicable breakers

Type of breaker	Rated Current (I_n) (A)
P160F, P160N, P160H	40, 100, 160
P250F, P250N, P250H	40, 100, 160, 250
P400F, P400N, P400H, P400S	250, 400
P630F, P630N, P630H, P630S	630

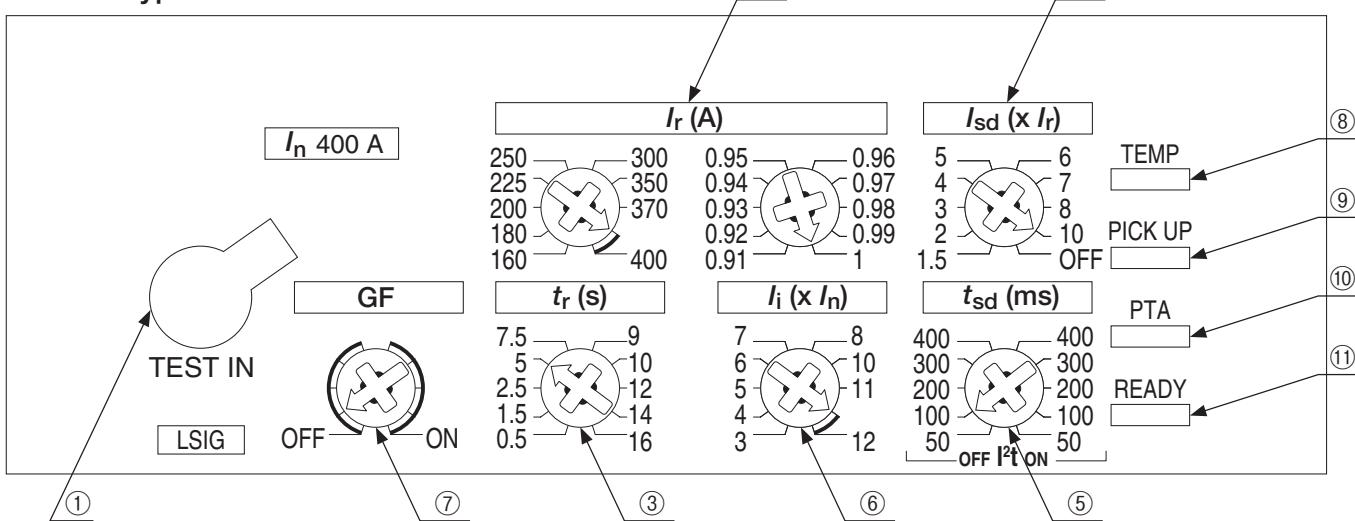

The TPOT electronic OCR is an overcurrent trip device with three elements: long time-delay trip, short time-delay trip, and instantaneous trip. It also has a preferential trip alarm function.

There are six dials to set the long time-delay trip time, short time-delay current, short time-delay time and instantaneous trip current. Two dials are assigned to allow the long time-delay trip current to be finely tuned.

The TPOP electronic OCR is an OCR with long time-delay trip, short time-delay trip, instantaneous trip, ground fault trip, and a preferential trip alarm function. And in the case of 4-pole products, N-phase protection feature is also provided. It is set with seven dials, with one additional dial for ground fault trip ON/OFF. In the case of 4-pole products, the same dial is used for neutral protection pick-up current selection and ground fault trip ON/OFF.

In addition, since TPOT type electronic OCR and TPOP type electronic OCR use an r.m.s. value control method, the effects of harmonics do not cause any malfunction.

■ TPOP type electronic OCR for P400N 3P

① A terminal for connecting the OCR checker.

② The rated current settings is set with two dials: current value and magnification.

③ This is the long time-delay time settings dial.

④ This is the short time-delay pickup current dial.

⑤ This is the short time-delay time settings dial.

⑥ This is the instantaneous trip pick-up current dial.

⑦ This is the ground fault trip function ON/OFF dial.

⑧ Temperature LED

Lights red when the OCR ambient temperature reaches a high temperature of 105°C or higher.

⑨ Alarm LED

Lights red during long time-delay pickup.

During energisation at 105% × I_r to 112.5% × I_r : Flashing

During energisation at 112.5% × I_r or more: Lights

⑩ PTA LED

The preferential trip alarm flashes orange during pickup and lights when it is output.

⑪ Status LED

Lights green when the OCR is operating normally. Flashes orange if there is an error.

■ TPOT and TPOP types overcurrent trip devices (OCR)

Rated Current I_n (A)	Number of poles	OCR type	Protection code	Setting method	Protective functions			Alarm function

		TPOP	LSIG	Seven dial type	●	●	●	●

● : Supplied as standard — : "no" or "not available".

Note ①: 3-phase 4-wire systems cannot be used.

Note ②: Output contact is available by connecting an optional cable (order type TPPHQTT130H).

■ OCR characteristics for P400N

TPOP type OCR (LSIG) (I_n)=250A, 400A

Rated current settings (A) $(I_r) = (I_r1) \times (I_r2)$ ③	When $(I_r)=250$ A (I_r1) (A)=100, 110, 125, 140, 160, 180, 200, 225, <u>250</u> adjustable When $(I_r)=400$ A (I_r1) (A)=160, 180, 200, 225, 250, 300, 350, 370, <u>400</u> adjustable $(I_r2)=0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.00$
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at $(I_r) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	$(I_r) \times 1.5, 2, 3, 4, 5, 6, 7, 8, 10$ or OFF Current setting tolerance within ±10%
Short time-delay time settings (ms) : (t_{sd})	50, <u>100</u> , 200, 300, 400 adjustable Ramp characteristics I^2t : ON or OFF However, definite time-delay characteristics with $(I_r) \times 10$ or more When $(t_{sd}) = 50$ ms Time-delay setting tolerance -30 ms or more +30 ms or less When $(t_{sd}) = 100$ ms to 400 ms Time-delay setting tolerance -20 ms or more +50 ms or less
Instantaneous trip pick-up current (A) : (I_i)	$(I_n) \times 3, 4, 5, 6, 7, 8, 10, 11, 12$ adjustable Current setting tolerance within ±15%
N-phase protection pick-up current (A) : (I_N)	For 3P OFF fixed ④ For 4P $(I_r) \times 50\%, 100\%$ or OFF ⑤
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip ⑥
Ground fault trip pick-up current (A) : (I_g)	Settings for 3P 3Ø3W and 4P 3Ø4W (3P 3Ø4W not supported) $(I_n) \times 20\%$ or OFF ⑦ Current setting tolerance within ±10%
Ground fault trip time settings (ms) : (t_g)	200 Time-delay setting tolerance -20 ms or more +50 ms or less ⑧
Preferential trip alarm pick-up current (A) : (I_p)	$(I_r) \times 80\%$ Current setting tolerance within ±10%
Preferential trip alarm time settings (s) : (t_p)	$(t_r) \times 50\%$ at $(I_p) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30 ms or less

Notes:

- ③: The rated current settings (I_r) can be set by two dials, the current value (I_r1) and the magnification (I_r2). Trip operation is performed with a pick-up current value exceeding $(I_r) \times 1.05$ and 1.2 or less.
- ④: There is no N-phase protection function for 3P.
- ⑤: N-phase protection is adjustable to 50% or 100% of the rated current setting (I_r). It is also possible to turn off the protection function. The N-phase protection setting dial also serves as the ON/OFF switch for ground fault trip. Trip operation is performed with a pick-up current value exceeding $(I_n) \times 1.05$ and 1.2 or less.
- ⑥: There is no N-phase time setting dial. The ON/OFF of the ramp characteristics conforms to the short time-delay trip settings.
- ⑦: In the case of 4P, the ON/OFF switch for ground fault trip is shared with the dial for N-phase protection pick-up current.
- ⑧: The ON/OFF of the ground fault trip ramp characteristics conforms to the short time-delay trip settings. However, $(I_n) \times 1$ or more with definite time-delay characteristics.

Remarks 1:

If not otherwise specified, the product will be delivered with the underlined standard setting values.

Remarks 2:

The TPOT type OCR (LSI) only has long time-delay trip, short time-delay trip, instantaneous trip, and preferential trip alarm.

■ TPOT type and TPOP type OCR operation characteristic curves

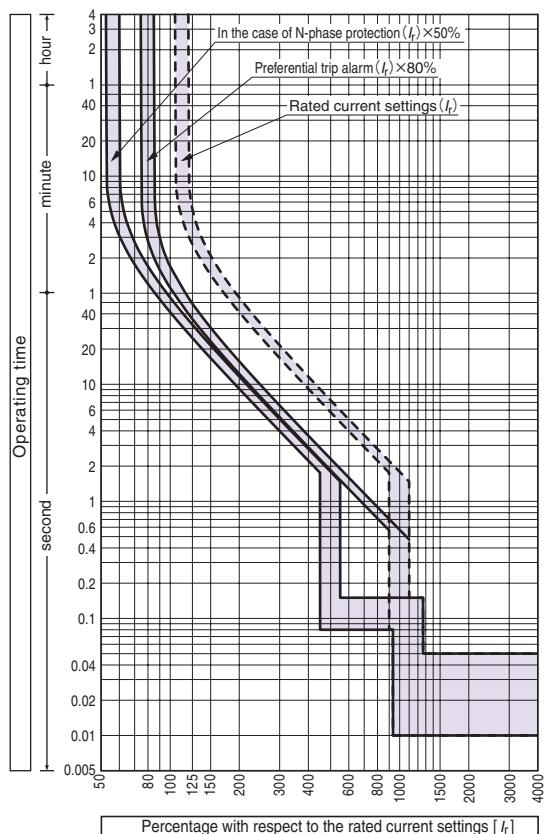

Long time-delay trip, short time-delay trip characteristics

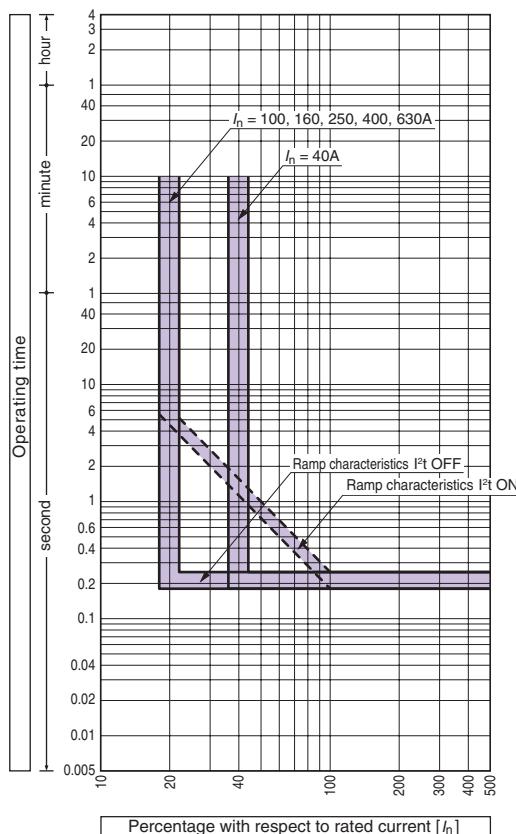

Instantaneous trip characteristics

N-phase protection, preferential trip alarm characteristics

Ground fault trip characteristics

(2) Alarm function/protective function

■ Preferential trip alarm (PTA)

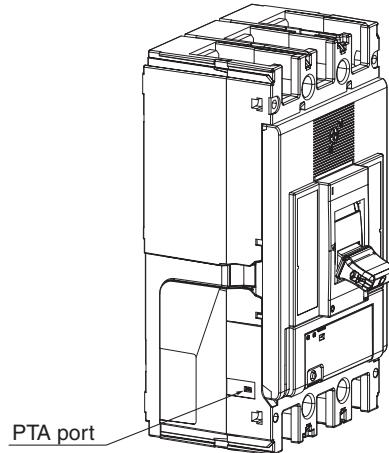

The load current is constantly monitored and if it exceeds the preferential trip alarm pick-up current I_p (= rated current setting (I_r) $\times 80\%$), the LED flashes and then the LED lights up and the contacts close at the operating times shown in the table below. If the load current becomes equal to or less than I_p , the LED turns off and the contacts open. Control power supply to the PTA is not required.

Long time-delay time setting t_r (s)		0.5	1.5	2.5	5.0	7.5	9.0	10	12	14	16
Estimated PTA operating time t_p (s)	For $I_p \times 200\%$	2.6	7.7	13	26	38	46	51	61	71	82
	For $I_p \times 600\%$	0.3	0.8	1.3	2.5	3.8	4.5	5.0	6.0	7.0	8.0
	For $I_p \times 720\%$	0.2	0.5	0.9	1.7	2.6	3.1	3.5	4.2	4.8	5.5

Contact rating

Output contact	Non-contact output 1a
	Contact capacity 24V AC/DC 100mA

By connecting the optional cable (order type TPPHQTT130H) to the PTA port, an alarm can be output using contact output (1a).

■ Ground fault trip (GF)

Protects equipment against fires caused by arc-ground fault currents. The ground fault trip current is set to 20% for rated current (I_n) of 100, 160, 250, 400 and 630 A and 40% for rated current (I_n) of 40 A.

Note: A 3-pole circuit breaker cannot be used with a 3-phase 4-wire system.

■ N-phase protection (NP)

A 4-pole circuit breaker can be used. This function protects against neutral wire overcurrent in a 3-phase 4-wire circuit. The N-phase protection pick-up current (I_N) can be switched to 100% or 50% of the rated current setting (I_r). It is also possible to turn off the N-phase protection function.

■ TPCH00 type OCR checker

You can use the OCR checker to easily check the long time-delay, short time-delay, instantaneous trip, ground fault trip, and preferential trip alarm functions in the field. For details, see Sections 8.

Notes:

①: Ground fault trip is not available when (I_n) is 250A.

②: In case of $(I_r) < (I_n)$, the setting tolerance becomes big when (I_N) is set at $(I_r) \times 50\%$.

Remarks: Characteristic No.4 will be applied as standard setting unless otherwise specified.

■ XOU type OCR Applicable breakers

Frame size (A)	Type of breaker
225	H250-NE
400	H400-NE, L400-NE, L400-PE
800	S800-NE, S800-RE, S800-PE, H800-NE, L800-NE, L800-PE
1000	S1000-SE, S1000-NE
1250	S1250-SE, S1250-NE, S1250-GE
1600	S1600-SE, S1600-NE

XOU type electronic OCRs allow you to select a wide range of protection characteristics simply by setting two dials located on the front of the breakers; one for selecting the rated current and the other for selecting a protection characteristic. They are equipped with five to seven protection characteristics as standard, providing optimum protective coordination between upstream circuit breakers and downstream circuit breakers and/or loads.

Characteristic 1: For generator protection

Characteristics 2, 3 and 4: For general feeder protection.

The possibility of selecting one from three options makes it easy to achieve selective coordination with upstream or downstream breakers.

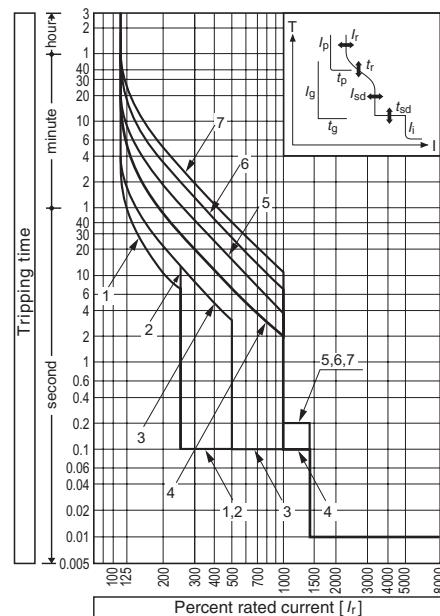

Characteristics 5, 6 and 7: For motor protection.

The selection of the option best suited to motor startup characteristics provides an optimum protection solution to motors.

If you require a characteristic which is not available as a preset on our standard electronic protection unit, send us the details and we will program a customized characteristic to your specification.

Note: Characteristic is programmable within certain limits. Contact us for details.

■ XOU type OCR Time/Current characteristic curves

(2) Optional OCR functions

■ Preferential trip alarm (PTA)

The preferential trip alarm function causes the alarm LED to flash when the load current exceeds 80% of the rated current (IR) and, after 40 seconds, provides a contact output (1a). The contact output can be used to provide an alarm. The PTA function uses RMS sensing and hence does not suffer a malfunction due to harmonics. Control power and the OCR controller (supplied by Terasaki) are required to use this function.

Note ① : When the OCR controller is installed on the breaker, the breaker cannot be equipped with a terminal block for connection to the shunt trip device and undervoltage trip device.

● Specifications of OCR controller

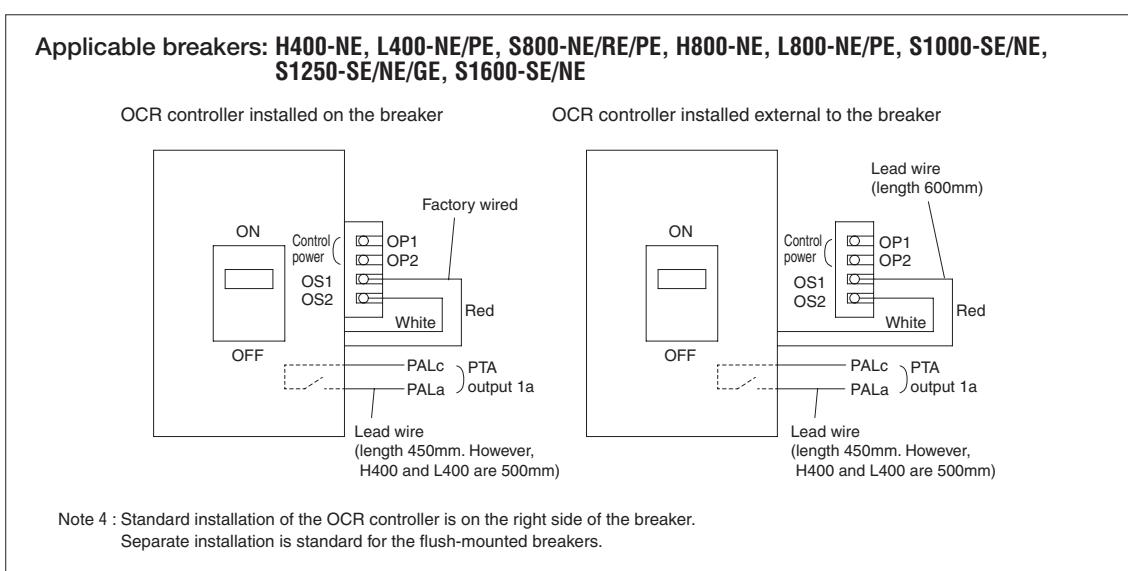

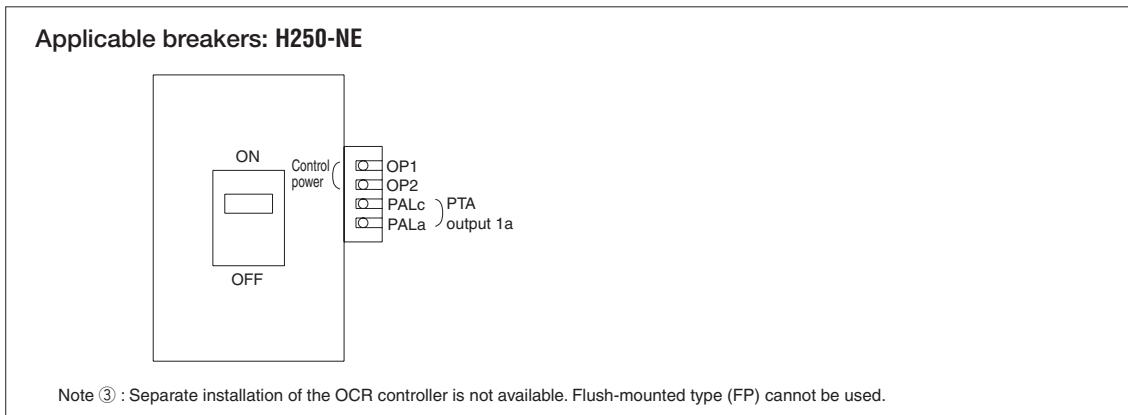

Control voltage ②	100 – 120V AC or 200 – 240V AC
(Rated voltage)	
Power consumption, VA	2VA
Note ② : The control voltage must be 85 to 110% of the rated voltage. Please state the rated voltage when ordering.	

Contact rating

Operating time (s) (t_p)	40 secs (fixed definite time-delay) setting tolerance is $\pm 10\%$.	
Contact output, (1a) lead wire standard. length (450mm)		
Output contact	Resistive load	Inductive load
Rating of contact	250V AC 220V DC	125VA (2A max) 60W (2A max)
Tripped indication ①	Pick-up LED flickers	

Note ① : The pick-up LED flickers at a higher current than [I_p]. When higher current flows continuously for 40 secs, the contact (1a) is output. PTA is automatically reset at a lower current than [I_p].

● OCR controller connection diagram

6

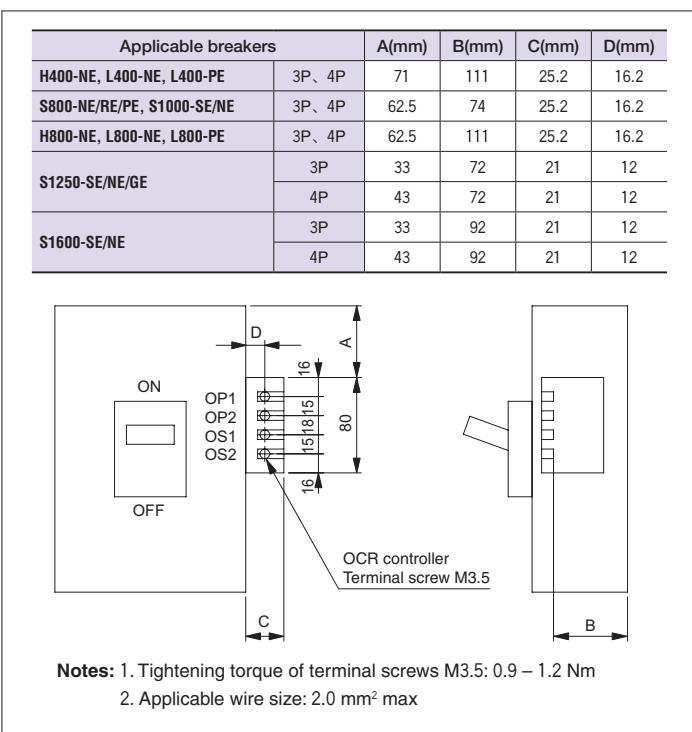

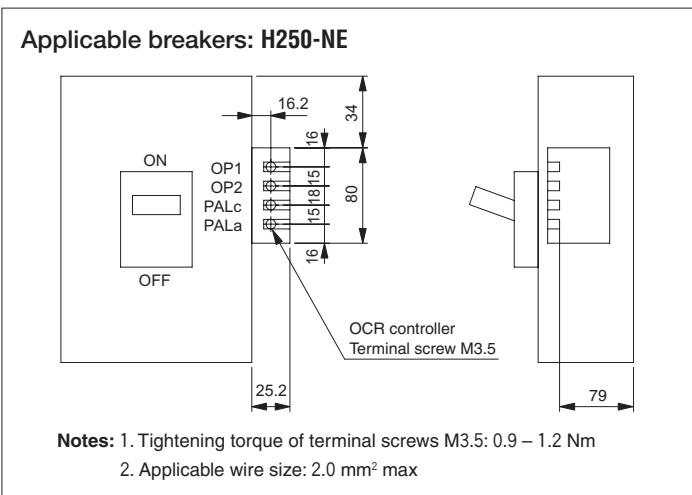

Accessories

Moulded Case Circuit Breakers

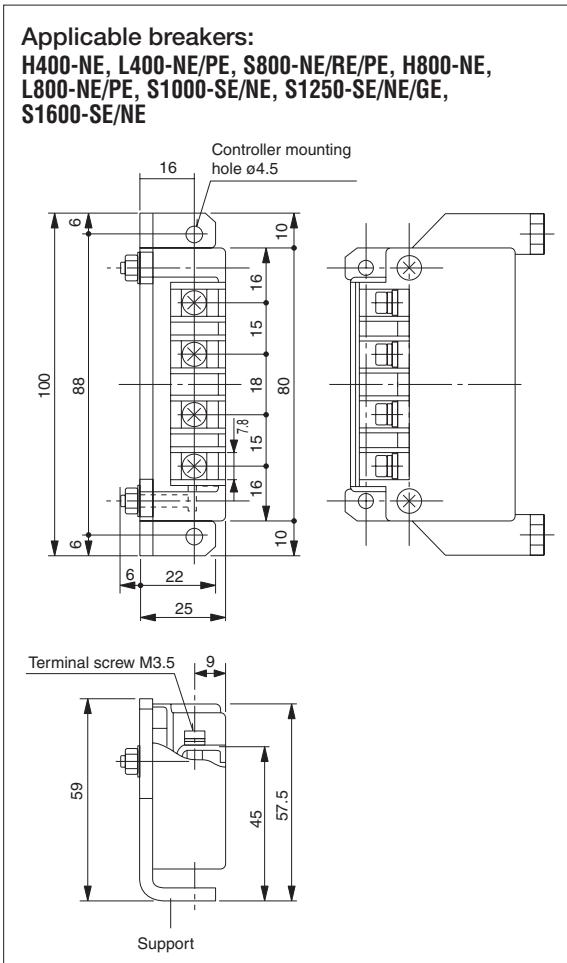

1 OCR for electronic breakers

(2) Optional OCR functions

- Mounting dimensions and terminal arrangement of the OCR controller installed on the breaker

- Outline of the OCR controller installed external to the breaker

■ Ground fault trip (GF)

The ground fault trip pickup current is 20% of the rated current (I_n). The GF function provides protection against fire that may be caused by arcing ground fault current. The GF function is not available when (I_n) is 250A.

Note: Separate type neutral CT is required when the GF function is added to a 3-pole breaker used in a 3-phase, 4-wire system. Contact us for details.

■ N-phase protection (NP)

The NP function is available on 4-pole breakers and provides protection to the neutral conductor in a 3-phase, 4-wire system against overcurrent. The NP pick-up current (I_N) can be switched to 100% or 50% of the rated current setting (I_f). The NP protection function can also be turned off. However, in the case of H250-NE, NP protection becomes $(I_f) \times 100\%$ interlocking, and the protection function cannot be turned off.

When $(I_f) < (I_n)$, $(I_N) = (I_f) \times 50\%$ setting will result in a large setting current error.

■ TNS-3 type OCR checker

You can use the OCR checker to easily check the OCR's long time-delay, short time-delay, instantaneous trip, ground fault trip and preferential trip alarm functions in the field. For details, see Section 8.

3. XOS type electronic OCR

(1) Overcurrent trip characteristics

XOS type electronic OCR for XS2500NE

XOS type OCR Applicable breakers

Frame size (A)	Type of breaker
2000	XS2000NE
2500	XS2500NE
3200	XS3200NE

With XOS type electronic OCR, the long time-delay trip, short time-delay trip, instantaneous trip, ground fault trip setting values can be independently changed.

You can set the ramp characteristics for short time-delay to facilitate selective coordination with downstream circuit breakers and fuses.

The ramp characteristics and the definite time-delay characteristics can be switched with the SHORT TIME I^2t switch in the OCR unit.

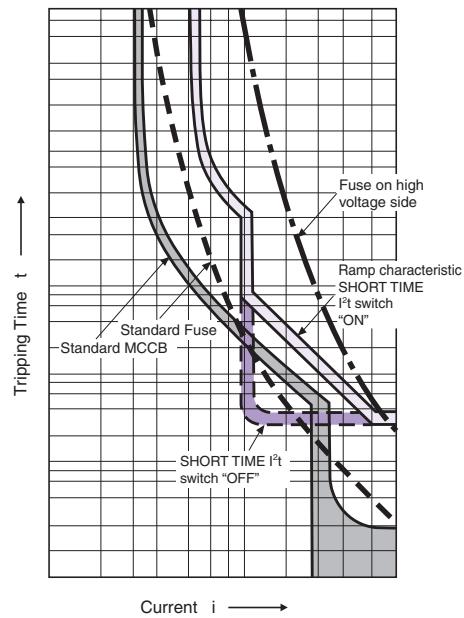

OCR characteristics for XS2500NE

CT rated current (A) : (I_n)	2500
Base current setting (A): (I_o)	$(I_n) \times (0.63-0.8-1.0)$
Long time-delay pick-up current (A) : (I_1)	$(I_o) \times (0.8-0.85-0.9-0.95-1.0)$ Non-tripping at (I_1) setting $\times 105\%$ and below. Tripping at 125% & above.
Long time-delay time settings (S) : (T_1)	(5–10–15–20–30) at $(I_1) \times 600\%$ current. Setting tolerance $\pm 20\%$
Short time-delay pick-up current (A) : (I_2)	$(I_o) \times (2-4-6-8-10)$ Setting tolerance $\pm 15\%$
Short time-delay time settings (S) : (T_2)	Opening time (0.1, 0.15, 0.2, 0.25, 0.3) in the definite time-delay. Total clearing time is +50ms and resettable time –20ms for the time-delay setting.
Instantaneous trip pick-up current (A) : (I_3)	Continuously adjustable from $(I_o) \times (3$ to 12) Setting tolerance $\pm 20\%$
* Pre-trip alarm pick-up current (A) : (I_p)	$(I_1) \times (0.7, 0.8, 0.9, 1.0)$ Setting tolerance $\pm 10\%$
* Pre-trip alarm time setting (S) : (T_p)	40 fixed definite time-delay. Setting tolerance $\pm 10\%$
* Ground fault trip pick-up current (A) : (I_G)	Continuously adjustable from $(I_n) \times (0.1$ to 0.4) Setting tolerance $\pm 15\%$
* Ground fault trip time setting (S) : (T_G)	Opening time (0.1-0.2-0.3-0.4-0.8) in the definite time-delay. Total clearing time is +50ms and resettable time is –20ms for the time-delay settings.

Note: * Optional

Note: The underlined values will be applied as standard ratings unless otherwise specified when ordering.

XOS type OCR Time/Current characteristic curves

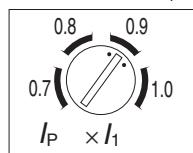

(2) Optional OCR functions

■ Preferential trip alarm (PTA)

The preferential trip alarm function causes the alarm LED to flash when the load current exceeds the pre-set current value and, after 40 seconds, provides a contact output (1a). The contact output can be used to provide an alarm. The PTA function uses RMS sensing and hence does not suffer a malfunction due to harmonics. Control power and the OCR controller (supplied by Terasaki) are required to use this function.

● PTA specifications

PTA pick-up current (I_p)

Adjustable steps of 70, 80, 90, 100% of the selected rated current [I_1].

Setting tolerance $\pm 10\%$

Note: The long time-delay trip does not operate 'first' when the pick-up current is adjusted to 100% of the rated current [I_1].

Operating time (S) (T_p)

40 secs (fixed definite time-delay) setting tolerance is $\pm 10\%$.

Output contact

Contact output, (1a) lead wire standard length (450mm)

		20VA (2A max) 10W (2A max)

Tripped indication ①

Pick-up LED flickers

Note ①: The pick-up LED flickers at a higher current than [I_p]. When higher current flows continuously for 40 secs, the contact (1a) is output. PTA is automatically reset at a lower current than [I_p].

● OCR controller (PTA and trip indication)

The OCR controller is installed in the left side of the breaker (standard). This can also be installed externally to the breaker (please specify when ordering).

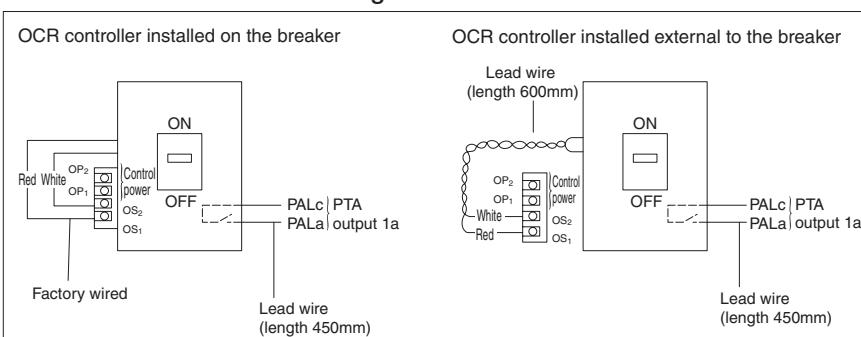

● Specifications of OCR controller

Power voltage ② 100 – 120V AC or 200 – 240V AC
(Rated voltage)

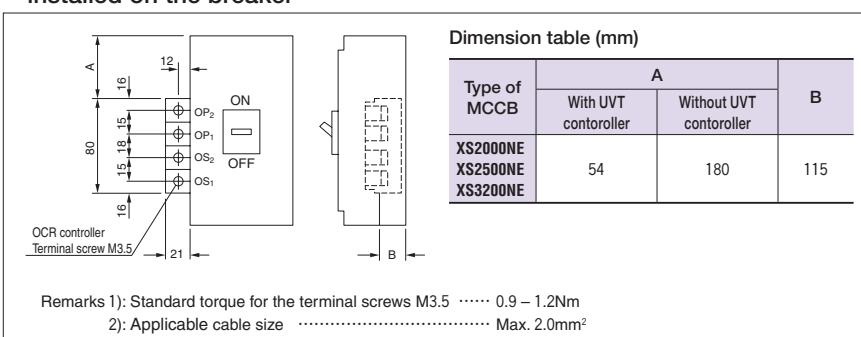

Power consumption, 2VA
VA

Note ②: The control voltage must be 80 to 110% of the rated voltage. Please state the rated voltage when ordering.

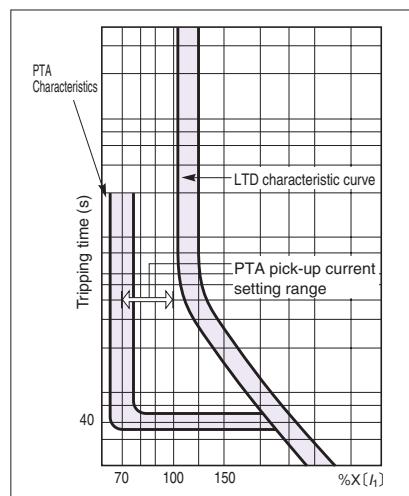

● OCR controller connection diagram

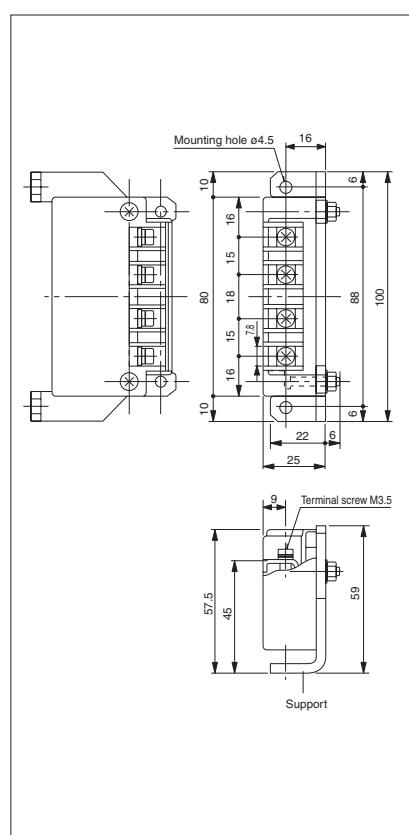

● Mounting dimensions and terminal arrangement of the OCR controller installed on the breaker

● PTA Characteristics

● Outline of the OCR controller installed external to the breaker

Accessories

Moulded Case Circuit Breakers

1 OCR for electronic breakers

(2) Optional OCR functions

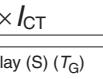

■ Ground fault trip (GF)

The ground fault trip pickup current is 10 to 40% of the CT rated current (I_{CT}).

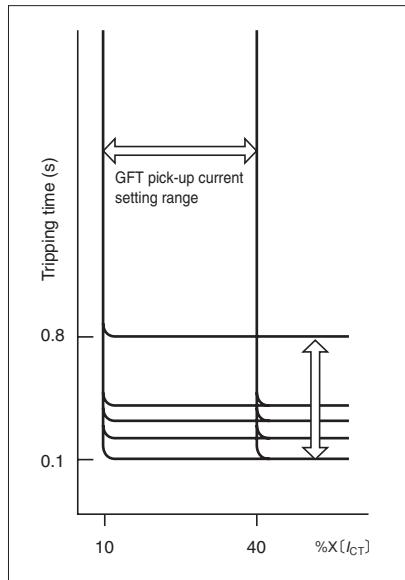

The GF function provides protection against fire that may be caused by arcing ground fault current.

Note that a separate type neutral CT is required when the GF function is added to a 3-pole breaker used in a 3-phase, 4-wire system. Contact us for details.

- GF Specifications

<p>GF Pick-up current (A) (I_G)</p>  <p>$I_G \times I_{CT}$</p>	<p>Continuously adjustable from 10 to 40% of the rated CT current [I_{CT}]. Setting tolerance $\pm 15\%$</p>
<p>GF Time-delay (S) (T_G)</p>  <p>T_G SEC</p>	<p>The GFT has a definite time-delay characteristic and is adjustable in steps of 0.1, 0.2, 0.3, 0.4 and 0.8s. Total clearing time is +50ms and resettable time is -20ms for the pre-set timedelay.</p>

- GF characteristics

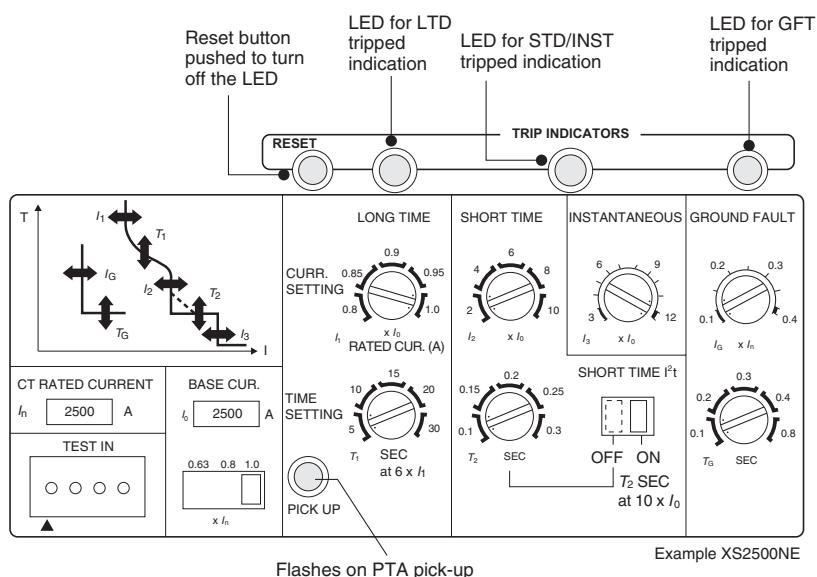

■ Trip indicators

The LEDS, when lit, indicate which trip function tripped the breaker; Long time-delay (LTD), short time-delay/instantaneous (ST/INST) or ground fault (GF). (control power required)

If a pre-trip alarm (PTA) is fitted, the LED control power can be used (common).

Trip indicator display

■ TNS-3 type OCR checker

You can use the OCR checker to easily check the OCR's long time-delay, short time-delay, instantaneous trip, ground fault trip, and preferential trip alarm functions in the field. For details, see Section 8.

Type of breaker	Peak exciting current, (A) (60Hz AC)								Connection diagrams and terminal numbers	
	Rated voltage	AC(V)			DC(V)					
		100-115	200-240	380-480	24	48	100-115	200-230		
XS2000NE, XS2000NN, XS2500NE, XS2500NN, XS3200NE, XS3200NN	1.1	0.4	0.93	2.52	1.55	0.67	0.35		<p>With anti-burn switch</p>	

Remarks:

- (1) The permissible voltage range is from 70% to 110% of the rated voltage.
Ensure that the voltage does not drop exceeding the permissible voltage range when SHT is actuated.
- (2) Breaker contacts usually start opening within 30 ms after the rated voltage is applied.

Remarks

- (1) Tripping voltage is 70 to 35% of the rated voltage. Resettable voltage is 85% or less of the rated voltage.
- (2) Operating time is below 50ms. (The time between no voltage and the main contact opening.)

(2) Instantaneous UVT (with UVT controller)

Type of breaker	Power supply capacity, (VA) ②			Exciting current, (mA) ①			
	Voltage (V)	AC(V)		DC(V)			
		100-120	200-240	380-450	24	100-115	200-240
XS2000NE, XS2500NE, XS3200NE		5 or more	5 or more	5 or more	22.7	6.0	—
XS2000NN, XS2500NN, XS3200NN							

Note: ①: No UVT controller is required. Note: ②: Equipped with the UVT controller.

Remarks:

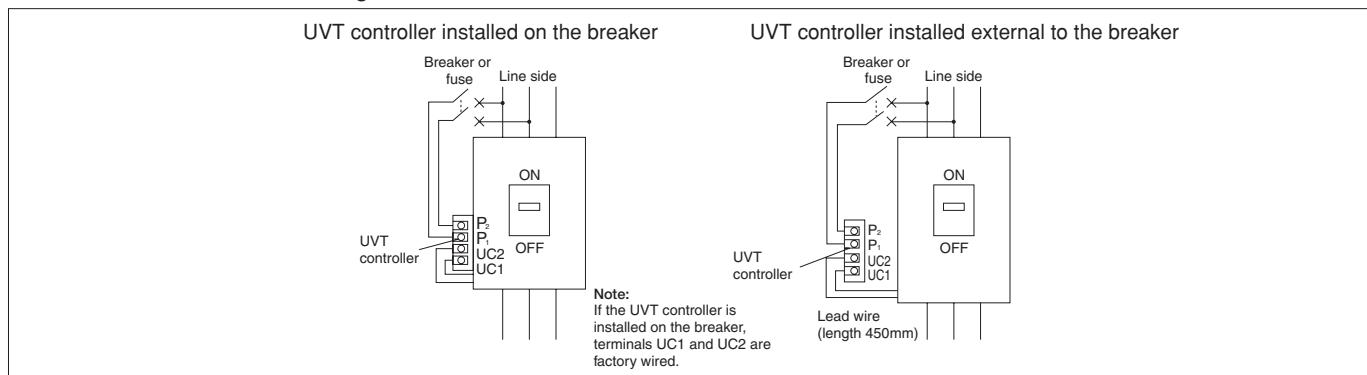

(1) Tripping voltage is 70 to 35% of the rated voltage. Resettable voltage is 85% or less of the rated voltage.

(2) When the breaker is in OFF position and becomes no control voltage, the UVT may trip or maintain OFF position the breakers.

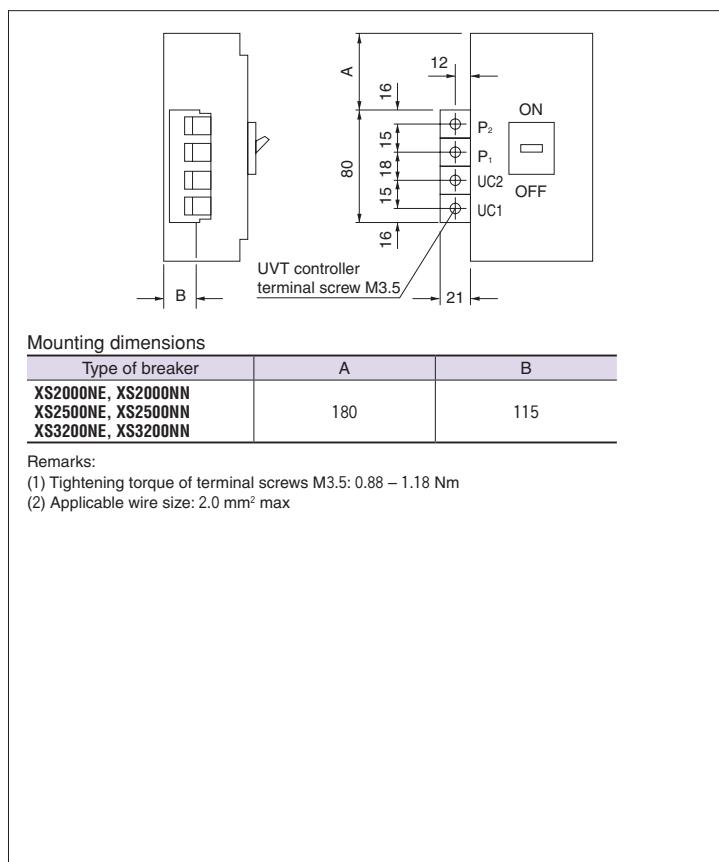

Please reset the breaker before turning the handle to ON position in either case.

A breaker equipped with the AC UVT needs a UVT controller (type XCU1S). The UVT controller is installed on the breaker by default. Separate installation of the controller is also available on request. Also, a UVT controller (XCU1D type) in the same shape with a time delay of less than 500 ms is available on request.

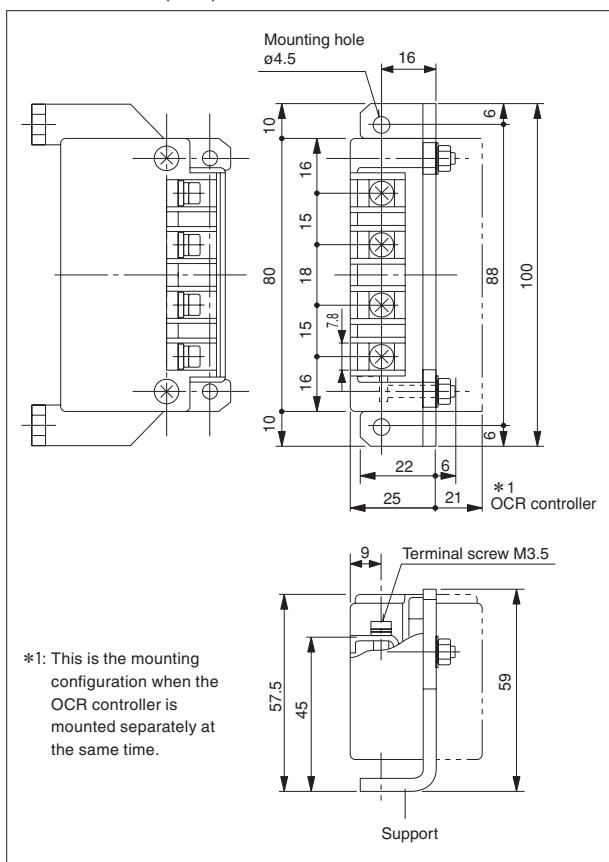

● UVT controller connection diagram

● Mounting dimensions and terminal arrangement of the UVT controller installed on the breaker

● Outline of the UVT controller installed external to the breaker (mm)

6

Accessories

Moulded Case Circuit Breakers

2 Internally mounted accessories

4. Undervoltage trip device (UV)

(3) Time delay type UVT (with UVT controller)

For the time-delay type UVT, the UVT controller is mounted on the circuit breaker body.

UVT controllers are available with 500 ± 300 ms operating times.

Applicable breakers	Power supply capacity, (VA) ②						Exciting current, (mA) ①					
	Rated voltage	AC (V)					DC (V)

6

Accessories

Moulded Case Circuit Breakers

3 Externally mounted accessories

1. Overview

① Toggle extension ————— [HA]

Lessens the force required to close, open or reset the breaker.

② Motor operator ————— [MC]

Allows electrical operation (closing, opening and resetting) of the breaker.

③ External operating handle
Allows the breaker installed in a switchboard or box to be operated from outside.

Breaker-mounted ————— [HB]
The handle is mounted directly on the breaker.

Door-mounted (depth adjustable) ————— [HP]
The handle is coupled to the breaker through a shaft.

Door-mounted (depth fixed) ————— [HE]

④ Mechanical interlock
Provides an interlock that allows one of two breakers to be closed.

Slide type ————— [MS]

Rear-connected type ————— [MB]

Link type ————— [ML]

Wire type ————— [MW]

⑤ Toggle holder ————— [HH]

Holds the breaker ON or OFF when simply fitted onto the breaker toggle.

⑥ Toggle lock ————— [HL]

Allows the breaker to be locked ON or OFF with commercially available padlocks.

⑦ Terminal cover

Prevents live parts of the breaker from being exposed.

For front-connected breakers ————— [CF]

For rear-connected and plug-in breakers ————— [CR]

For front-connected breakers with cable clamps ————— [CS]

⑧ Interpole barrier ————— [BA]

Enhances electrical insulation between poles and prevents shortcircuit due to electrically conductive foreign matter.

⑨ Terminal block ————— [TF]

Terminates lead wires from internally mounted accessories.

⑩ Door flange ————— [DF]

Is intended to cover the cutout of a switchboard panel from the front.

⑪ DIN rail adaptor ————— [DA]

Allows the breaker to be mounted on DIN rails.

6

Accessories

Moulded Case Circuit Breakers

3 Externally mounted accessories

2. Toggle extension (HA)

Reduces the force of ON, OFF, and RESET operations.

③ Supplied as standard.

• Mounting and Removal

Pull lock pins out left and right in direction of the arrows, and slot the toggle extension in place. The lock pins are spring loaded. Removal-Pull out left and right side lock pins and hold while removing.

3. Motor operators (MC)

(1) T2MC/TPMC motor operators

Features

★ Installation and removal ease

Motor driven type: Simply rotate the two fixing levers to allow the motor operator to be installed on or removed from the circuit breaker. Spring charged type: The compact and lightweight design enables easy installation and removal.

★ High-speed, stable actuation

The operating time as short as up to 0.1 second makes it possible to use the motor operators for synchronized closing of breakers.

★ Silent operation

The motor driven type uses a direct drive system, so it operates quietly.

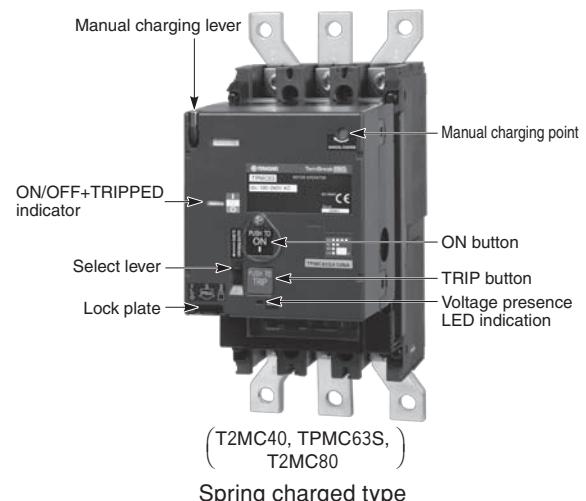

★ "Lock-in off" capability

This capability allows the breaker to be padlocked in the OFF state. Up to three padlocks with a 5 to 8 mm hasp diameter can be used. Padlocks are not supplied.

★ Compact and lightweight

The spring charged type is small and the OCR part of the circuit breaker is not hidden. This means that it is not necessary to be removed when changing the circuit breaker settings.

Operation method				
Spring charged				
Operating time, (s)	ON		0.1 ③	
	OFF/RESET		1.5 ③④	
Operating switch ratings		100V 0.1A (Open voltage/current: 48V/1mA)		
Power supply required		300VA or higher		
Dielectric withstand voltage (for one minute)		1500V AC (1000V AC for 24/48V DC)		
Weight		3.5kg		
Colour of cover		Grey Blue		

Notes:

- ① : Permissible operating range is 85 to 110%. A power transformer is available as option for 380V AC or 400-460V AC.
- ② : The currents shown are the maximum values at the maximum rated operational voltage.
- ③ : The operating time is the value when the rated operational voltage is supplied. Loss of the control power in this operating time may cause the motor operator to fail to work.
- ④ : The motor operator is of a short time duty. Do not subject it to more than 10 continuous ON-OFF operations. If this occurs, allow the motor operator to cool for at least 15 minutes.
- ⑤ : When the rated operational voltage is 24V DC the open voltage will be 22V DC.

Motorized operation

The motor operator has an input-signal self-hold circuit. To reset the tripped breaker to the OFF position, close the OFF (RESET) switch. The voltage presence LED indication is on when the power is supplied to the motor operator.

■ Auto reset feature (optional)

The auto reset feature allows the breaker to be automatically reset approx. 1.5 seconds after the breaker trips open. This option contains auto-reset switches and does not require to use auxiliary or alarm switches installed in the breaker.

Note 1: that after the thermal OCR trips a thermal-magnetic breaker, the breaker cannot be immediately closed though it can be auto-reset. Wait for a few minutes after the tripping and provide a close signal to the breaker.

Note 2: Do not use an alarm switch to reset breakers.

This option resets the tripped breaker automatically, regardless of the cause of the tripping.

Manual operation

Motor driven type: Pull the manual operating handle out to turn it ON and OFF. Rotating the handle anticlockwise turns ON the breaker and clockwise turns OFF or resets the breaker.

Spring charged type: Switch to manual operation from motorized operation using the select lever. Use the manual spring charging handle to charge the spring and press the ON or TRIP button to perform manual operation.

Spring charged type: When the TRIP button is pressed while the control power is supplied, the circuit breaker turns OFF automatically, and if equipped with an alarm switch, it provides an output signal because the MCCB trips once. Press the TRIP button all the way in. Pressing the TRIP button halfway causes the breaker to go off without tripping, resulting in no alarm signal delivered even if the breaker is equipped with an alarm switch.

Breakers position in tripped state

Breakers position when the breaker has tripped differs depending on the motor operator being of standard type or being equipped with the auto reset feature (optional), as shown in the table below:

Motor driven type

Cause of trip	Breakers position in tripped state	
	Standard type	With auto reset feature
Manually tripped	TRIP	○ (OFF)*
SHT/UVT		
Overcurrent		

* : The motor operator automatically provides OFF (reset) operation to the breaker.

Spring charged type

Cause of trip	Breakers position in tripped state	
	Standard type	With auto reset feature
Manually tripped	○ (OFF)*	
SHT/UVT	TRIP	○ (OFF)*
Overcurrent		

* : The motor operator automatically provides OFF (reset) operation to the breaker.

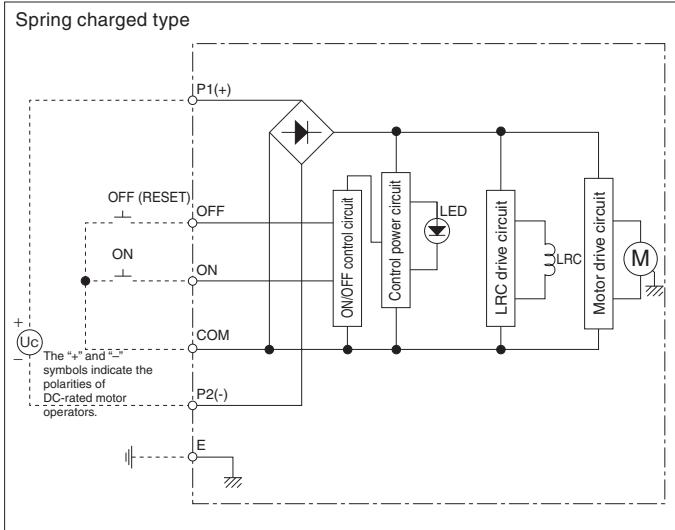

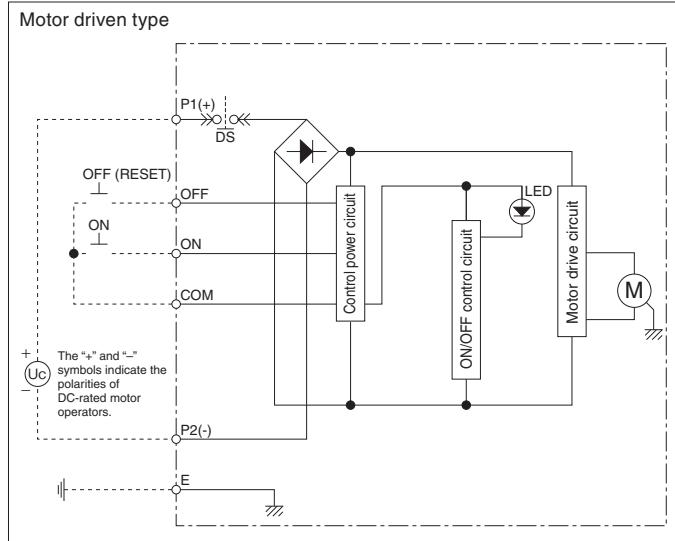

Table 1 Electrical interlock cables

Interlock cables Order codes	Length	Remarks
T2MM25L05	500mm	An electrical interlock is adopted between T2MC25/25L, TPMC16S, and TPMC25S types.
T2MM25L15	1500mm	
T2MM40L06	600mm	An electrical interlock is adopted between T2MC40, T2MC80, and TPMC63S types.
T2MM40L21	2100mm	
T2MM40S06	600mm	An electrical interlock is adopted between T2MC40 (or TPMC63S, T2MC80) and T2MC25 types (or TPMC16S, TPMC25S types).
T2MM40S21	2100mm	

Operation precautions

1. Ensure that the actual operation voltage ranges from 85% to 110% of the rated one.
2. Use operation switches whose ratings and power capacity is as specified in the "Ratings and Specifications" table on the previous page.
3. Ensure an operating time of 50 msec or more when operating switches to turn on/off the breaker. A shorter operating time may result in failure in operating the breaker. In such a case, repeat the operation.
4. Do not continuously apply ON/OFF operating signals. ON/OFF signals must be separated by 0.3 sec or more. With spring charged type, OFF and RESET operations must be 1.5 sec or more apart.
5. With motor driven type, do not connect alarm switches (AL) to the control circuit (OFF, ON or COM terminals). Doing so may cause the motor operator to fail to work.
6. If the motor operator is used in conjunction with a shunt trip device (SH), ensure that voltage supply to the (SH) is shut off after the reset operation ends.
7. To operate multiple motor operators in batch, do not directly connect their control terminals in series, but through a separate relay for each. Otherwise, sneak circuits may form and cause the motor operators to fail to work.
8. Use noise filters if the control power supply of the motor operator is shared by peripheral devices. Otherwise, power supply noise may cause malfunction of the peripheral devices.
9. When the motors are used in conjunction with the mechanical interlock the electrical interlock should be provided between the motors in order to avoid the simultaneous closing. The followings are the available electrical interlock cables.

Features

★ Clear status indication

Colour indication: Red means ON, green OFF and white TRIPPED.

★ Quick closing

Energy in a charged spring closes the breaker 60 msec or less.

High-speed, time-stable operation is ensured after multiple times of closing cycles.

★ Equipped with anti-pumping circuit

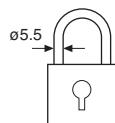

When the closing signal is applied, TRIP-RESET-ON cycles are not repeated even though the cause of tripping is in the breaker.

★ Ease of manual ON-OFF operation

It turns ON and OFF with one stroke using manual operating handle.

★ "Lock-in off" capability

This capability allows the breaker to be padlocked in the OFF state. Padlocks are not supplied.

Operation mechanism

Motorized operation

■ Breaker ON

Closing the ON switch activates the latch release coil (LRC), thereby releasing the closing spring to turn the breaker ON.

■ Breaker OFF (RESET)

Closing the OFF/RESET switch activates the (Y) control relay, thereby starting the motor to turn the breaker OFF. At the same time, the closing spring is charged. The motor is deenergized when the breaker turns OFF (RESET).

■ Breaker auto-reset (optional)

The auto-reset option uses an auto-reset switch (alarm switch) through which the closing spring is charged and the breaker is reset automatically after the breaker trips open. This option will be factory wired.

Notes: 1. For S1250 and S1600, installable alarm switch will be only 1 piece.

2. When the breaker is equipped with the auto-reset option, a signal self-hold circuit is required because the signal provided by the alarm switch is a pulse.

3. Not applicable to thermal-magnetic breakers

Manual operation *

■ Breaker ON . OFF (RESET)

Pulling down the manual operating handle turns the breaker ON and OFF/REST alternately.

The handle returns to the original position when released.

* With auto-charge/discharge feature:

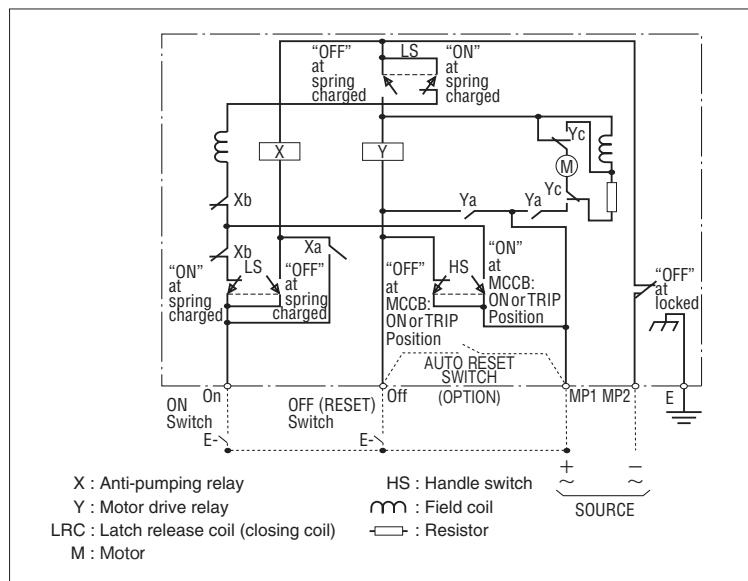

When manual ON operation is performed while the control power is applied, the handle switch (HS) operates to discharge the closing spring.

OFF operation causes the closing spring to be charged.

When manual ON or OFF operation is performed while the control power is lost, and afterwards the control power is recovered, the closing spring is discharged or charged in the same manner as described above.

When the auto-charge/discharge action is in progress, mechanical noises will be heard. The noises however do not mean a failure.

Control circuit diagram

Operation Precautions

- Ensure that the actual operation voltage ranges from 85% to 110% of the rated one.
- The motor operator is short-time rated. The number of continuous switching (ON-OFF) cycles must not exceed 10. After any 10 continuous switching cycles, provide a pause of at least 15 minutes to the motor operator for cooling.
- When conducting the dielectric withstand voltage test, apply voltage between the control terminal group and ground. Ensure that the test voltage does not exceed 1500V AC (500V AC if the rated operation voltage is 24V DC).
- If the breaker is equipped with the UVT device, ensure that the UVT device is reset before providing a closing signal to the breaker.
- It takes up to three seconds to complete motorized OFF operation. If the breaker requires to be immediately opened from a remote location in an emergency, add the SHT or UVT device to the breaker for remote electrical tripping.
- Make sure that the current and switching capacities of the operation switch are appropriate for the application.
- Avoid repeated and continuous applications of the operation power supply to the motor operator.
- Use noise filters if the control power supply of the motor operator is shared by peripheral devices. Otherwise, power supply noise may cause malfunction of the peripheral devices.
- Be sure to apply power to control power terminal MP1. If the breaker is turned ON or OFF manually without power applied to MP1, the auto charge/discharge feature is disabled, and thus the motor operator will not be activated next time. In such a case, applying the rated operation voltage between control power terminals MP1 and MP2 will enable the auto charge/discharge feature.
- The control power lost at the breaker charge process, and afterwards the control power is recovered, the closing spring is no more charged. Unusually the breaker reopen a charge depending on the handle position of the breaker.

Moulded Case Circuit Breakers

3 Externally mounted accessories

4. External operating handles

(1) Breaker-mounted (field installable small type) (HB)

The external operating handle is a tool that allows the breaker installed in a switchboard to be operated from outside and complies with IEC 60204-1. The breaker-mounted type external operating handle is designed to be mounted directly to the breaker body.

■ Outer view

Types
T2HB16L
TPHB16S
T2HB25L
TPHB25S

■ Mounting instructions

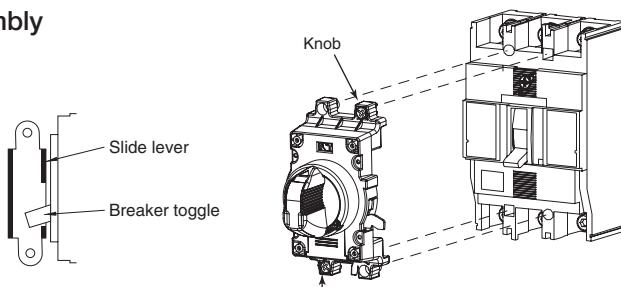

The external operating handle has not been mounted on the breakers.

For details on how to mount the handle, see the Operating Instructions packaged with the product.

[1] Mounting of external operating handle assembly

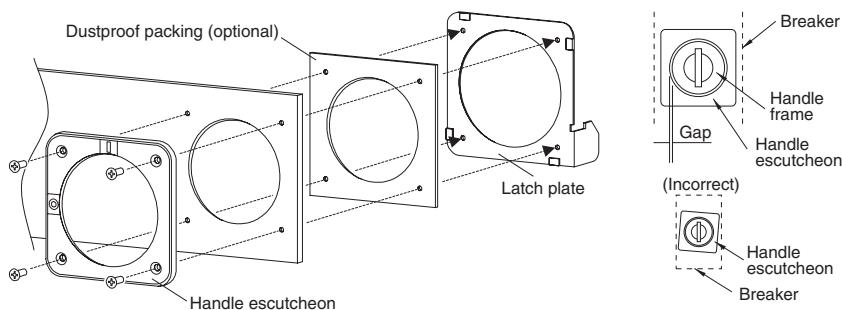

Install the circuit breakers and handles as follows.

- Make sure that the breaker is in the OFF position.
- Put the external operating handle assembly onto the breaker in place so that the breaker toggle is engaged with the slide lever of the assembly. Rotate two knobs to secure the handle assembly.

[2] Installation of handle escutcheon and latch plate

- Drill holes in the panel according to the panel cutout dimensions. Sandwich the panel between the handle escutcheon and latch plate and temporarily tighten using the supplied screws.
- Close the panel. Make adjustment so that the gap between the handle assembly and handle escutcheon is even and the assembly is not inclined against the breaker.

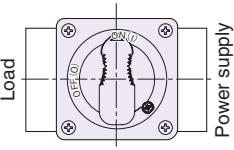

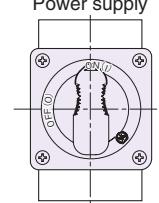

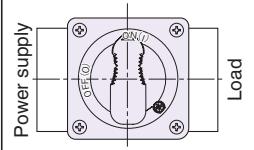

■ Breaker mounting direction

The ON (I) and OFF (O) indication of the external operating handle can be re-oriented in steps of 90 degrees with respect to the operating mechanism.

This allows the indication position to remain the same whether the breaker is mounted vertically (right side up or upside down) or horizontally (on its left side or on its right side).

The upper power supply type is standard. If a non-standard type is required, state the type when ordering.

R: Right power supply type	U: Upper power supply type (standard)	L: Left power supply type
		

- For a change in mounting direction, see the Operating Instructions packaged with the product.

■ Panel lock mechanism

The external operating handle keeps the panel door locked when in the 'ON' position. There are two types, RESET Open and OFF Open.

(1) RESET Open (Standard type)

The handle is turned to the RESET OPEN position to open the panel door.

(2) OFF Open

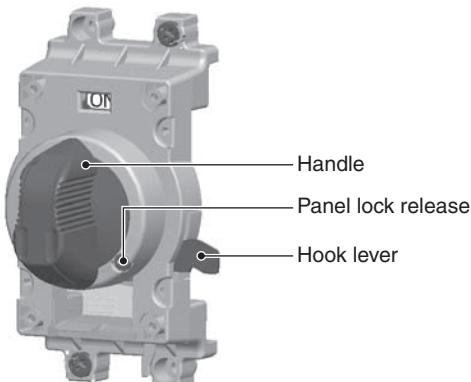

The handle is turned to the OFF position to open the panel door.

• Panel lock release knob (Standard)

The release knob enables the panel door to be opened with the handle in the 'ON' position. To release: turn the release knob in the direction of anti-clockwise with a flat-bladed screwdriver.

• Safety interlock (Standard)

The safety interlock prevents the breaker from turning ON as long as the panel is open. This interlock can be released using the hook lever.

■ Toggle lock mechanism

• Padlock (Standard)

This mechanism allows the breaker to be padlocked in the OFF position.

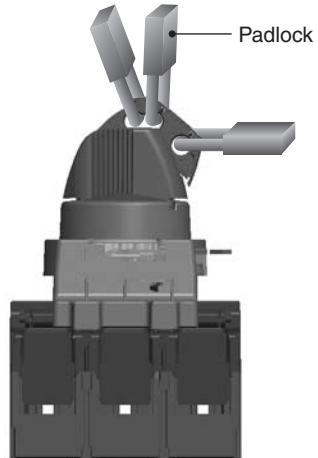

Padlocks are not supplied.

Up to three padlocks can be installed.

Padlock dimensions (mm)

Type of handle	A	Dia.

Applicable breaker types	A ①	B	C	D	Square shaft applicable	Shaft support
E160-SF/SJ, S160-SCF/SCJ/SF/SJ/SN	229 min.	56	107	186	T2PS251	Yes
	243 max.	70	121	186		
	343 max.	170	221	186	T2PS252	
	443 max.	270	321	186	T2PS253	
	543 max.	370	421	186	T2PS254	

Notes:

①: "Min (minimum)" means the minimum possible distance from the panel surface to the breaker mounting surface, which can be formed by cutting the square shaft.

"Max (maximum)" means the maximum distance of the same section, which is formed with no cutting of the square shaft.

A: Distance from the panel surface to the breaker mounting surface

B: Length of the tube to cover the square shaft

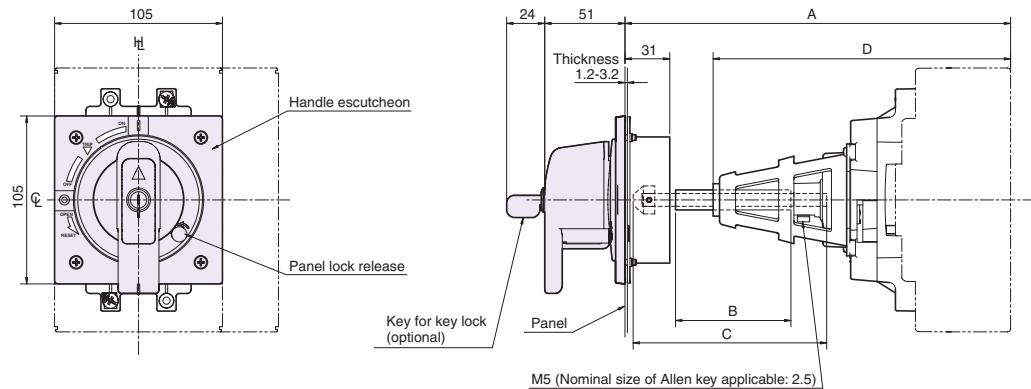

C: Length of the square shaft

D: Distance from the tip of the shaft support to the breaker mounting surface

D: Distance from the tip of the shaft support to the breaker mounting surface

4. External operating handles

(4) Door-mounted (fixed depth) (HE)

Door-mounted type external operating handles allow breakers installed in control centers or switchboards to be manually operated from outside.

■ Outer view

■ Operation mechanism

- **ON**

Turn the handle clockwise to the ON position.

- **OFF**

Turn the handle anti-clockwise to the OFF position.

- **RESET**

When the breaker trips, the handle indicates tripped turn the handle anti-clockwise to the RESET position. This will reset the breaker.

- **OPENING THE PANEL**

Turn the handle anti-clockwise to 'OPEN COVER'. The lock is released and the panel can be opened.

■ Panel lock mechanism

The external operating handle keeps the panel door locked when in the ON, OFF or TRIP position. Hook holder shown in the outline dimension drawing should be provided.

- **Panel lock release knob**

When the release knob is turned clockwise the panel door can be opened irrespective of the handle being in the ON, OFF or TRIP position.

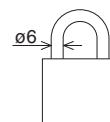

■ Toggle lock mechanism

- **Padlock (Standard)**

This mechanism allows the breaker to be padlocked in the ON or OFF position.

Padlocks are not supplied.

6. Toggle holder (HH) and toggle lock (HL)

Toggle holder (HH)

Simply fitting the toggle holder onto the breaker toggle disables breaker operation without using padlocks.

Toggle lock (HL)

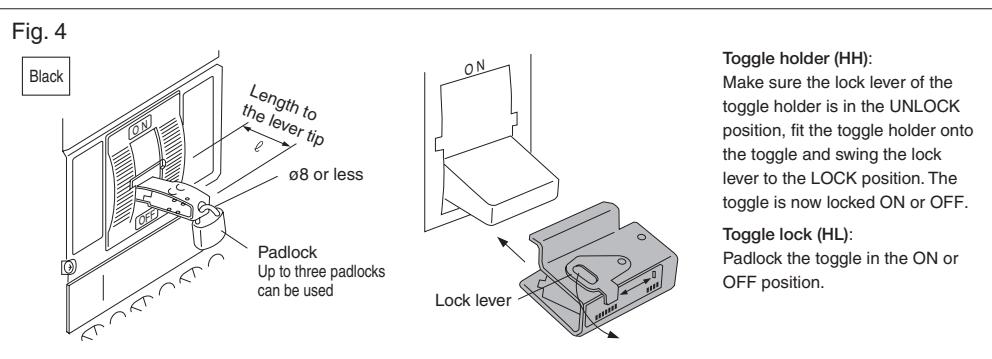

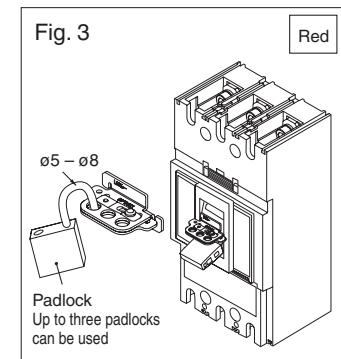

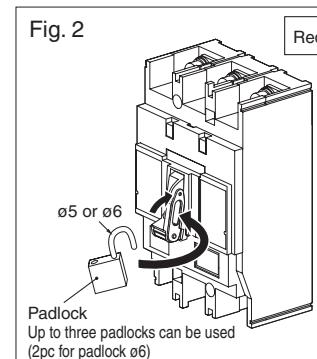

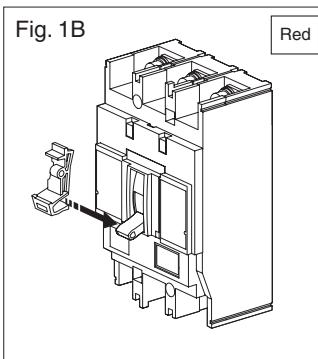

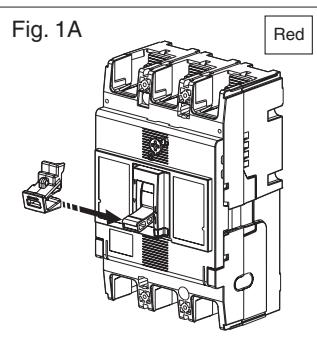

The toggle lock is a tool that locks the breaker ON or OFF. When an overcurrent occurs, the breaker will trip even if the breaker toggle is locked in the ON position. (Use commercially available padlocks).

Toggle holders/toggle locks

Frame size (A)	Type of breaker	Toggle holder		Figure	Toggle lock		Figure
		Order codes	Marking codes		Order codes	Marking codes

Notes:

①: Same as toggle lock.

Toggle holder (HH):
Make sure the lock lever of the toggle holder is in the UNLOCK position, fit the toggle holder onto the toggle and swing the lock lever to the LOCK position. The toggle is now locked ON or OFF.

Toggle lock (HL):
Padlock the toggle in the ON or OFF position.

6

Accessories

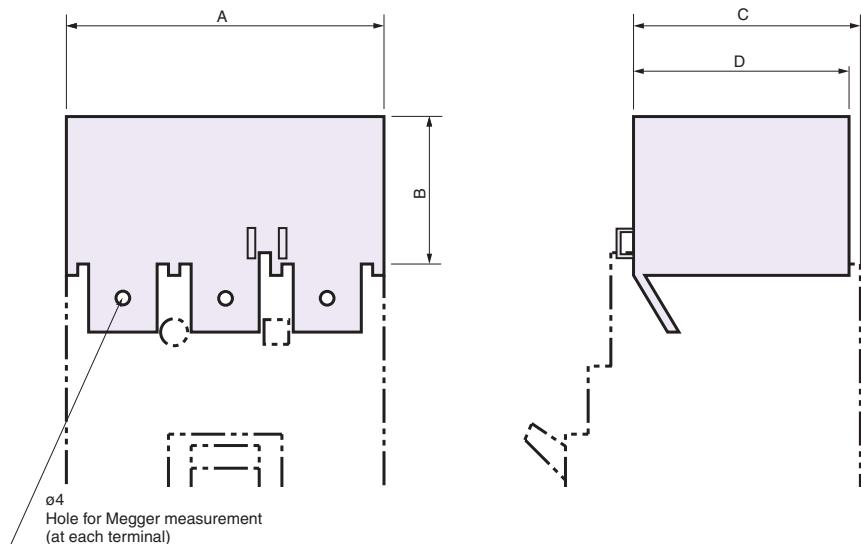

Moulded Case Circuit Breakers

3 Externally mounted accessories

7. Terminal covers

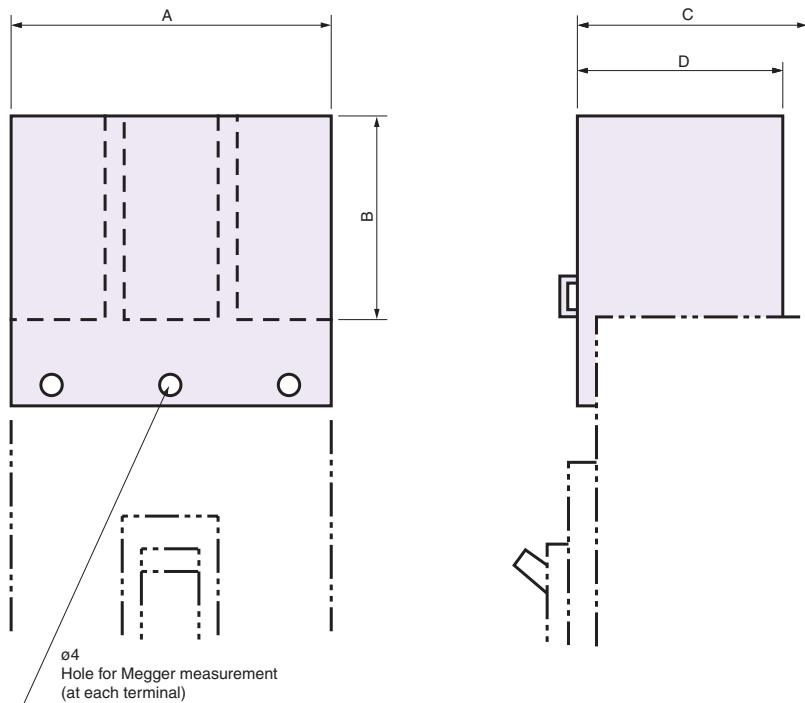

Terminal covers prevent live parts of the circuit breaker from being exposed to the external environment. There are three types of terminal covers: front-connected type, rear-connected and plug-in type, and cable clamps type. Select appropriate terminal covers depending on the type and application of the breaker.

(1) CF for front-connected breakers

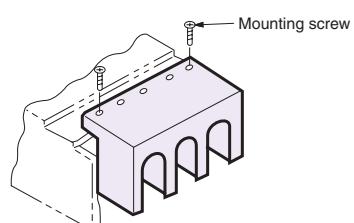

Plug-in mounted version

This version can be mounted simply by being plugged in the breaker body.

Screw-mounted version

The terminal covers for 630 to 1000AF (except P630E/F/N/H/S/D) are mounted to the breaker covers using tapping screws. The terminal cover for 1250AF is mounted to insert nuts of the circuit breaker cover using screws. The insert nuts do not come standard with the circuit breaker. Please be sure to state "with terminal cover (CF)" when ordering the circuit breaker.

■ To be stated when ordering

- Please state the order codes on the next page if ordering separately from the breaker.
- For the terminal cover for 1250AF, please order with the breakers.

Notes:

- ①: Long: Long cover, Short: Short cover, Straight: Straight cover for straight extension bars, Wide: Wide cover for spread extension bars
- ②: The asterisk indicates the number of poles. Please state the number of poles at the asterisk position when ordering. One set includes 1 pc terminal cover.
- ③: Not applicable to 3-pole breakers with extension bars.
- ④: Applicable to 3-pole breakers with spread extension bars.
- ⑤: When used without the extension bars.
- ⑥: There will be an approx. 40 mm gap between the bottom of the terminal cover and the breaker mounting surface.
- ⑦: Values in parentheses indicate the distance to the head of terminal cover mounting screws.
- ⑧: Not sold as a single unit. When ordering the circuit breaker, please specify whether you require a grey-blue terminal cover or a transparent terminal cover.
- ⑨: Please use with a connection wire of 100mm² or less. If you use 150mm², the insulating sleeve will touch the terminal cover and cannot be attached.
- ⑩: Please use with a connection wire of 200mm² or less. If you use 325mm², the insulating sleeve will touch the terminal cover and cannot be attached.

Notes:

① : The asterisk indicates the number of poles. Please state the number of poles at the asterisk position when ordering. One set includes 1 pc terminal cover.

② : Values in parentheses indicate the distance to the head of terminal cover mounting screws.

6

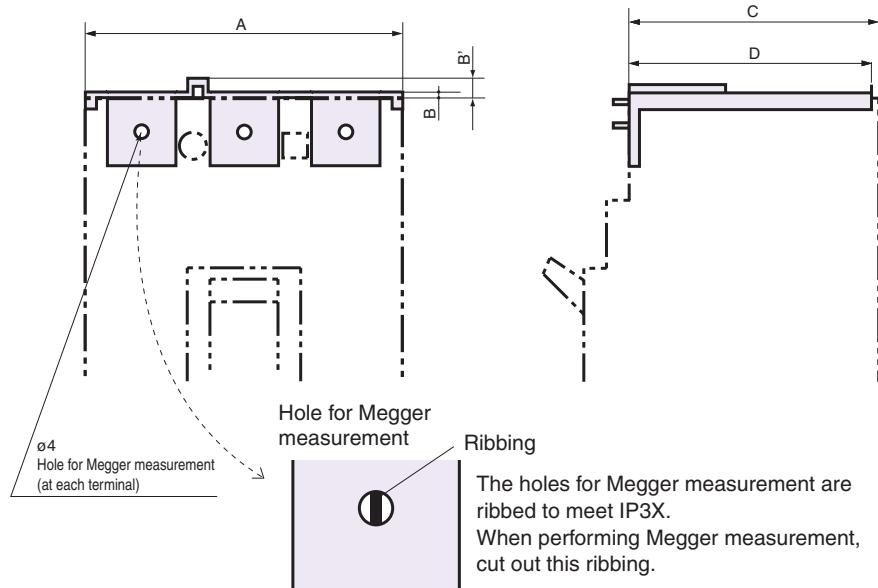

Accessories

Moulded Case Circuit Breakers

3 Externally mounted accessories

7. Terminal covers

(3) CS for breakers with cable clamps

Plug-in mounted version

This version can be mounted simply by being plugged in the breaker body.

To be stated when ordering

- Please state "with CS" if ordering along with the breaker.
- Please state the order codes of the following table if ordering separately from the breaker.

Dimensions, mm

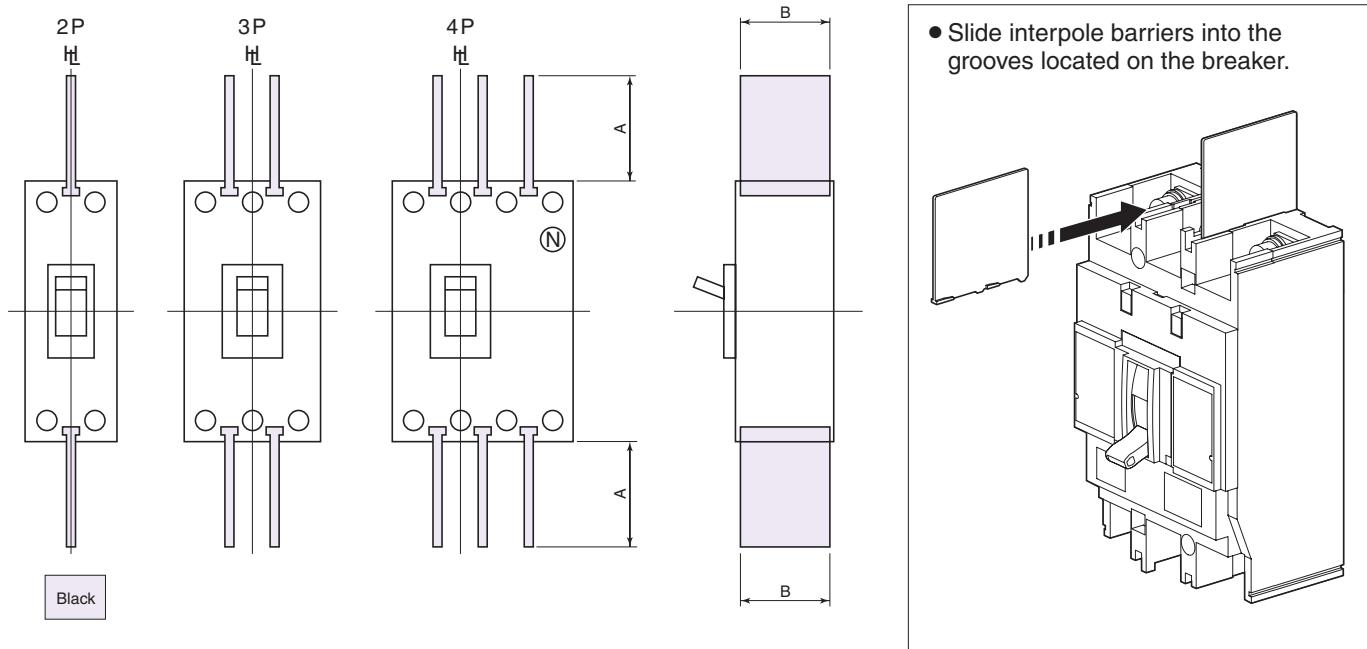

Frame size (A)	Types of MCCBs	Order codes ①	Marking codes	A		B	B'	C	D	Colour of cover P: Grey Blue	Mounting version

Notes:

① : The asterisk indicates the number of poles. Please state the number of poles at the asterisk position when ordering. One set includes 1 pc terminal cover.

8. Interpole barriers (BA)

Interpole barriers serve to enhance electrical insulation between poles and prevent short-circuit due to electrically conductive foreign matter. Combined use of interpole barriers and terminal covers (standard type) is not possible.

■ To be stated when ordering

Please specify the type when ordering. Supplied as a set of 2 pcs.

Caution: Be sure to use the interpole barriers supplied with the breaker in order to prevent accidents.

○: 2P: 1 pc, 3P: 2 pcs, 4P: 3 pcs of interpole barriers are supplied as standard. (Front-connected only)

— : "no" or "not available".

One set include 2 pcs for a 3P single-sided pole.

6

Accessories

Moulded Case Circuit Breakers

3 Externally mounted accessories

9. Terminal blocks (TF)

Applies to front-connected type and rear-connected type circuit breakers with internally mounted accessories.
The lead wires from internally mounted accessories are connected to this terminal block.

18mm width 6 terminals

Vertical leading type (T2TF00L) with 160A frame MCCB

Mounting position/typical terminal arrangement		Dimensions, mm	
Frame size (A)	Types of breakers MCCB	Number of poles	A
160	E160-SF, S160-SCF	2/3/4 poles	9
	E160-SJ, S160-SCJ/SF/SJ/SN	3/4 poles	9
Notes:			
1) Tightening torque of M3.5 terminal screws: 0.9 – 1.2 Nm			
2) Applicable wire size: 2.0mm ² max			

Combination of terminal arrangement (for 3 poles/4 poles)

AX	AL	SH	UV	Left terminal	Right terminal
1C	1C	1	—	Ex.2	Ex.4
1C	1C	—	1	Ex.2	Ex.5

Long time-delay trip, short time-delay trip characteristics

Instantaneous trip characteristics

Note: See page 6-4 for ground fault trip and preferential trip alarm characteristics.

Overcurrent tripping characteristics**TPOP OCR (LSIG) $I_n=40A, 100A, 160A$**

Rated current settings (A) (I_r) = (I_r 1) × (I_r 2)	When (I_n) = 40 A, (I_r 1) (A) = 16, 18, 20, 22, 25, 28, 32, 34, 37, 40 adjustable When (I_n) = 100A, (I_r 1) (A) = 40, 45, 50, 57, 63, 72, 80, 87, 93, 100 adjustable When (I_n) = 160A, (I_r 1) (A) = 63, 70, 80, 90, 100, 110, 125, 135, 150, 160 adjustable (I_r 2) = 0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.00
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at (I_r) × 600%
Short time-delay pick-up current (A) : (I_{sd})	(I_r) × 1.5, 2, 3, 4, 5, 6, 7, 8, 10 or OFF Current setting tolerance within ±10%
Short time-delay time settings (ms) : (t_{sd})	50, 100, 200, 300, 400 adjustable Ramp characteristics I't: ON or OFF However, definite time-delay characteristics with (I_r) × 10 or more When (t_{sd}) = 50ms, Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100 ms to 400ms, Time-delay setting tolerance -20ms or more +50ms or less
Instantaneous trip pick-up current (A) : (I_r)	(I_n) × 3, 4, 5, 6, 7, 8, 10, 12, 15 adjustable for I_n 40A, I_n 100A (I_n) × 3, 4, 5, 6, 7, 8, 9, 10, 11 adjustable for I_n 160A Current setting tolerance within ±15%
N-phase protection pick-up current (A) : (I_N)	For 3P OFF fixed For 4P (I_r) × 50%, 100% or OFF
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip
Ground fault trip pick-up current (A) : (I_g)	Settings for 3P 3Ø3W and 4P 3Ø4W (3P 3Ø4W not supported) (I_n) × 40% for I_n 40A, (I_n) × 20% for I_n 100A, 160A or OFF Current setting tolerance within ±10%
Ground fault trip time settings (ms) : (t_g)	200 Time-delay setting tolerance -20ms or more +50ms or less
Preferential trip alarm pick-up current (A) : (I_p)	(I_r) × 80% Current setting tolerance within ±10%
Preferential trip alarm time settings (s) : (t_p)	(I_r) × 50% at (I_r) × 600% Time-delay setting tolerance -20% -20ms or more +0% +30 ms or less

Notes:

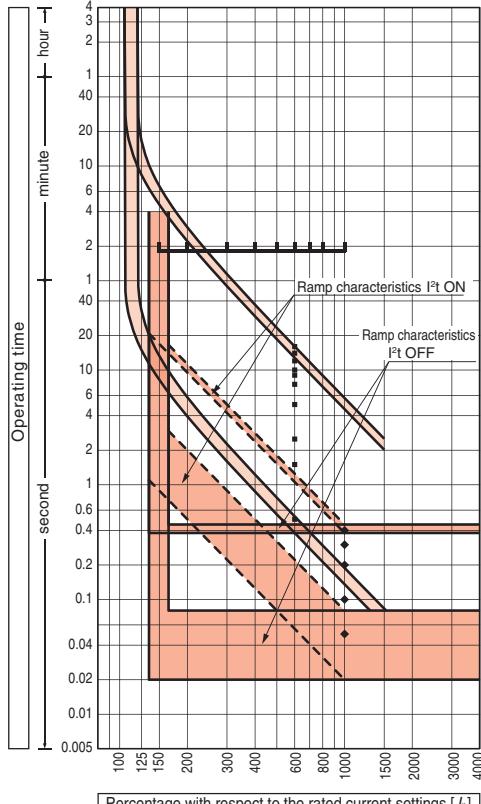

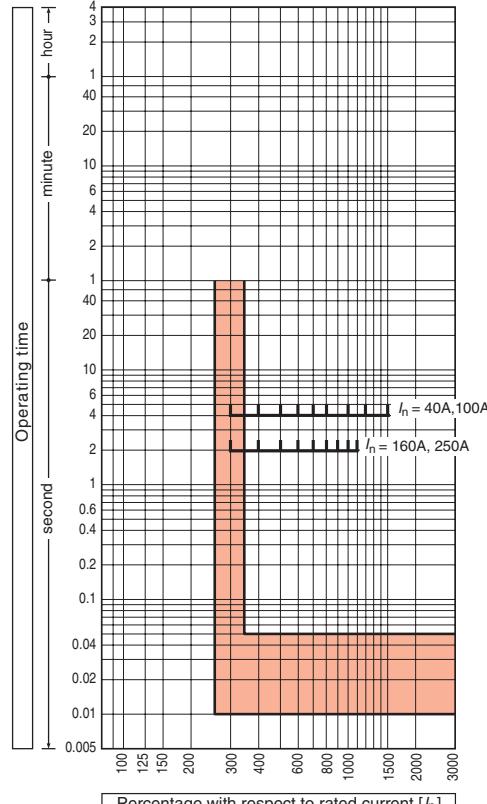

- ①: When $I_r=144A$ or more and $t_r=16s$ is set, the device operates with $I_{sd}=I_r \times 9$ even if the max. $I_{sd}=I_r \times 10$ is set.
- ②: When $I_{sd}=OFF$ is set, the long time-delay will become ramp characteristics last to 2s at Max 1,760A in the area of 1280A or more of conduction current. If the long time-delay time setting is faster than the ramp characteristic time then the device operates with the long time-delay time setting.

Remarks:

- 1: If not otherwise specified, the product will be delivered with the underlined standard setting values.
- 2: The TPOT type OCR (LSI) only has long time-delay trip, short time-delay trip, instantaneous trip, and preferential trip alarm.

Electronic Characteristics**P250F, P250N, P250H****Time/Current characteristic curves****P250F, P250N, P250H $I_n=40A, 100A, 160A, 250A$**

Note: See page 6-4 for ground fault trip and preferential trip alarm characteristics.

Overcurrent tripping characteristics**TPOP OCR (LSIG) $I_n=40A, 100A, 160A, 250A$**

Rated current settings (A) ($I_r = I_r1 \times I_r2$)	When $(I_r)=40A$, $(I_r1)(A)=16, 18, 20, 22, 25, 28, 32, 34, 37, 40$ adjustable When $(I_r)=100A$, $(I_r1)(A)=40, 45, 50, 57, 63, 72, 80, 87, 93, 100$ adjustable When $(I_r)=160A$, $(I_r1)(A)=63, 70, 80, 90, 100, 110, 125, 135, 150, 160$ adjustable When $(I_r)=250A$, $(I_r1)(A)=100, 110, 125, 140, 160, 180, 200, 225, 250$ adjustable $(I_r2)=0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.00$
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, 5, 7.5, 9, 10, 12, 14, 16 adjustable at $(I_r) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	$(I_r) \times 1.5, 2, 3, 4, 5, 6, 7, 8, 10$ or OFF Current setting tolerance within ±10%
Short time-delay time settings (ms) : (t_{sd})	50, 100, 200, 300, 400 adjustable Ramp characteristics I^2t : ON or OFF However, definite time-delay characteristics with $(I_r) \times 10$ or more When $(t_{sd}) = 50\text{ms}$, Time-delay setting tolerance -30 ms or more +30 ms or less When $(t_{sd}) = 100\text{ ms}$ to 400 ms , Time-delay setting tolerance -20ms or more +50ms or less
Instantaneous trip pick-up current (A) : (I_r)	$(I_r) \times 3, 4, 5, 6, 7, 8, 10, 12, 15$ adjustable for $I_n=40A, I_n=100A$ $(I_r) \times 3, 4, 5, 6, 7, 8, 9, 10, 11$ adjustable for $I_n=160A, I_n=250A$ Current setting tolerance within ±15%
N-phase protection pick-up current (A) : (I_N)	For 3P OFF fixed For 4P $(I_r) \times 50\%, 100\%$ or OFF
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip
Ground fault trip pick-up current (A) : (I_g)	Settings for 3P 3Ω3W and 4P 3Ω4W (3P 3Ω4W not supported) $(I_r) \times 40\%$ for $I_n=40A$, $(I_r) \times 20\%$ for $I_n=100A, 160A, 250A$ or OFF Current setting tolerance within ±10%
Ground fault trip time settings (ms) : (t_g)	200 Time-delay setting tolerance -20ms or more +50ms or less
Preferential trip alarm pick-up current (A) : (I_p)	$(I_r) \times 80\%$ Current setting tolerance within ±10%
Preferential trip alarm time settings (s) : (t_p)	$(I_r) \times 50\%$ at $(I_p) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30 ms or less

Notes:

- ①: When $I_r=225A$ or more and $t_r=16s$ is set, the device operates with $I_{sd}=I_r \times 9$ even if the max. $I_{sd}=I_r \times 10$ is set.
- ②: When $I_{sd}=\text{OFF}$ is set, the long time-delay will become ramp characteristics last to 2s at Max 2,750A in the area of 2000A or more of conduction current. If long time-delay time setting is faster than the ramp characteristic time then the device operates with the long time-delay time setting.

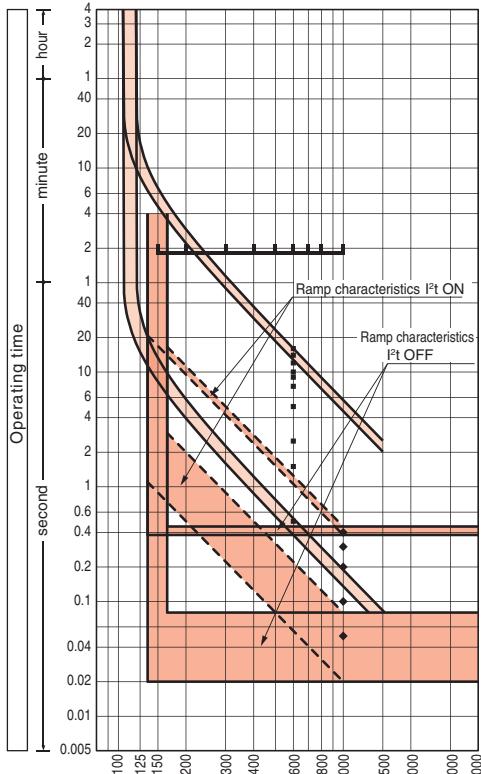

Remarks:

- 1: If not otherwise specified, the product will be delivered with the underlined standard setting values.
- 2: The TPOP type OCR (LSI) only has long time-delay trip, short time-delay trip, instantaneous trip, and preferential trip alarm.

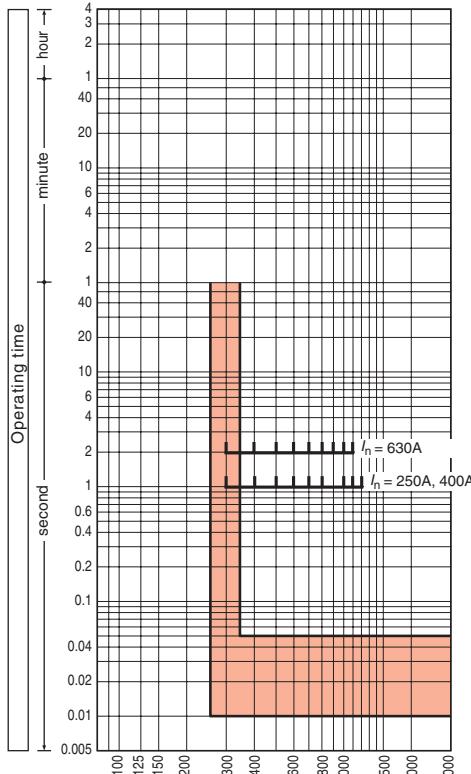

Electronic Characteristics**P400F, P400N, P400H, P400S, P630F, P630N, P630H, P630S****Time/Current characteristic curves**

P400F, P400N, P400H, P400S, P630F, P630N, P630H, P630S $I_n=250A, 400A, 630A$

Long time-delay trip, short time-delay trip characteristics

Instantaneous trip characteristics

Note: See page 6-4 for ground fault trip and preferential trip alarm characteristics.

Overcurrent tripping characteristics

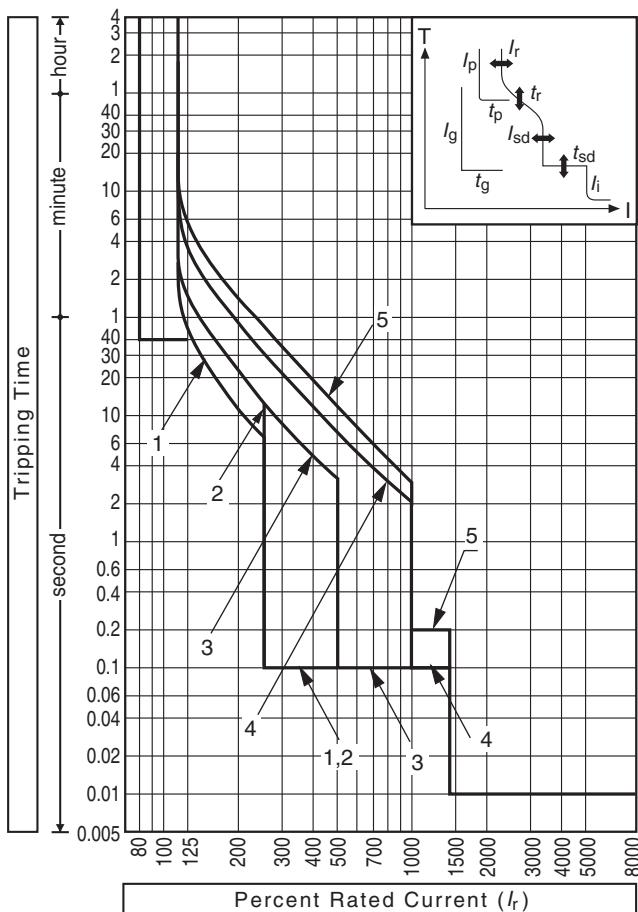

TPOP OCR (LSIG) $I_n=250A, 400A, 630A$

Rated current settings (A) $(I_r) = (I_r1) \times (I_r2)$	When (I_n)=250A, (I_r1) (A)=100, 110, 125, 140, 160, 180, 200, 225, <u>250</u> adjustable When (I_n)=400A, (I_r1) (A)=160, 180, 200, 225, 250, 300, 350, 370, <u>400</u> adjustable When (I_n)=630A, (I_r1) (A)=250, 300, 350, 370, 400, 500, 600, <u>630</u> adjustable $(I_r2)=0.91, 0.92, 0.93, 0.94, 0.95, 0.96, 0.97, 0.98, 0.99, 1.00$
Long time-delay time settings (s) : (t_r)	0.5, 1.5, 2.5, <u>5</u> , 7.5, 9, 10, 12, 14, 16 adjustable at $(I_r) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30ms or less
Short time-delay pick-up current (A) : (I_{sd})	$(I_r) \times 1.5, 2, 3, 4, 5, 6, 7, 8, 10$ or OFF Current setting tolerance within $\pm 10\%$
Short time-delay time settings (ms) : (t_{sd})	50, <u>100</u> , 200, 300, 400 adjustable Ramp characteristics I't: ON or OFF However, definite time-delay characteristics with $(I_r) \times 10$ or more When (t_{sd}) = 50ms, Time-delay setting tolerance -30 ms or more +30 ms or less When (t_{sd}) = 100 ms to 400ms, Time-delay setting tolerance -20ms or more +50ms or less
Instantaneous trip pick-up current (A) : (I_r)	$(I_n) \times 3, 4, 5, 6, 7, 8, 10, 11, 12$ adjustable for I_n 250A, I_n 400A $(I_n) \times 3, 4, 5, 6, 7, 8, 9, 10, 11$ adjustable for I_n 630A Current setting tolerance within $\pm 15\%$
N-phase protection pick-up current (A) : (I_N)	For 3P OFF fixed For 4P $(I_r) \times 50\%, 100\%$ or OFF
N-phase protection time settings (s) : (t_N)	Operates with long time-delay time setting (t_r) and short time-delay time setting (t_{sd}) and also operates with instantaneous trip
Ground fault trip pick-up current (A) : (I_g)	Settings for 3P 3ø3W and 4P 3ø4W (3P 3ø4W not supported) $(I_n) \times 20\%$ for I_n 250A, 400A, 630A or OFF Current setting tolerance within $\pm 10\%$
Ground fault trip time settings (ms) : (t_g)	200 Time-delay setting tolerance -20ms or more +50ms or less
Preferential trip alarm pick-up current (A) : (I_p)	$(I_r) \times 80\%$ Current setting tolerance within $\pm 10\%$
Preferential trip alarm time settings (s) : (t_p)	$(t_r) \times 50\%$ at $(I_p) \times 600\%$ Time-delay setting tolerance -20% -20ms or more +0% +30 ms or less

Remarks:

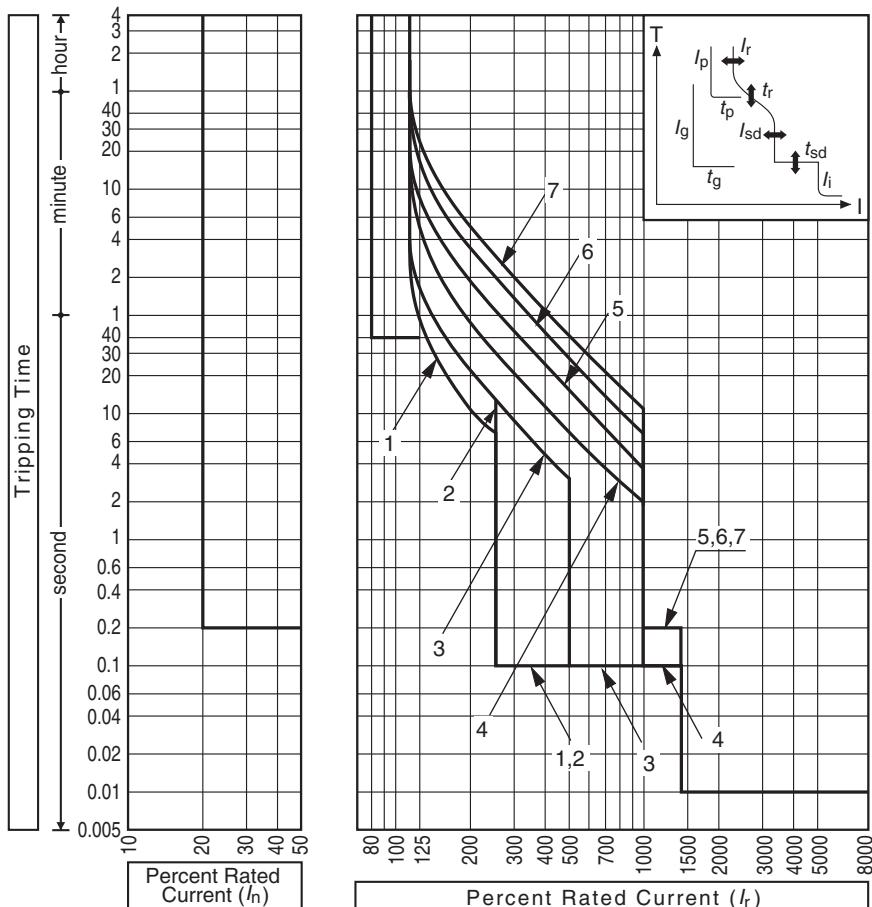

1: If not otherwise specified, the product will be delivered with the underlined standard setting values.

2: The TPOP type OCR (LSI) only has long time-delay trip, short time-delay trip, instantaneous trip, and preferential trip alarm.

Electronic Characteristics**H250-NE****Time/Current characteristic curves**H250-NE $I_n=40A, 125A, 160A, 250A$ **Overcurrent tripping characteristics**XOU OCR (LSI) $I_n=40A, 125A, 160A, 250A$

Characteristics No.	1	2	3	4	5

Instantaneous trip pick-up current (A) (I_3)	Continuously adjustable from $(I_0) \times (3\text{ to }12)$ Setting tolerance $\pm 20\%$
Pre-trip alarm pick-up current (A) (I_P)	$(I_1) \times (0.7, 0.8, \underline{0.9}, 1.0)$ Setting tolerance $\pm 10\%$
Pre-trip alarm time setting (S) (T_P)	40 fixed definite time-delay. Setting tolerance $\pm 10\%$
Ground fault trip pick-up current (A): (I_G) ①	Continuously adjustable from $(I_n) \times (0.1\text{ to }0.4)$ Setting tolerance $\pm 15\%$
Ground fault trip time setting (S): (T_G) ①	Opening time (0.1–0.2–0.3–0.4–0.8) in the definite time-delay. Total clearing time is +50ms and resettable time is –20ms for the time-delay settings
Trip indicators	See page 6-12

Note ①: Cannot be used with the preferential trip alarm.

Remark: If not otherwise specified, the product will be delivered with the underlined standard setting values.

① : Studs are horizontal direction as standard. They will be factory installed in the horizontal direction unless otherwise specified. Vertical position is a special specification. Please specify this when ordering.

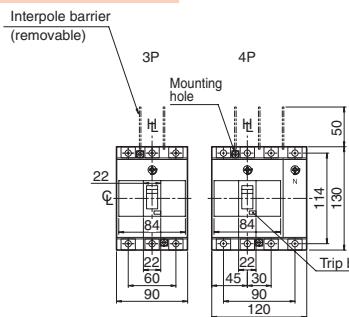

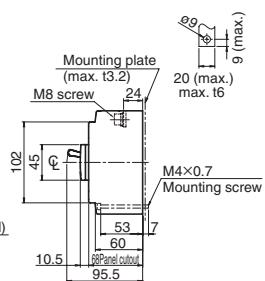

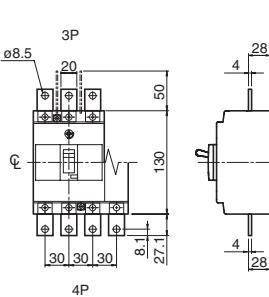

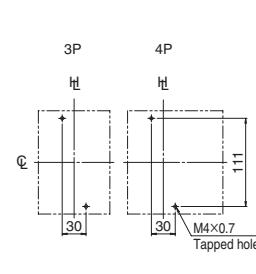

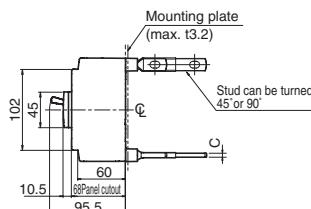

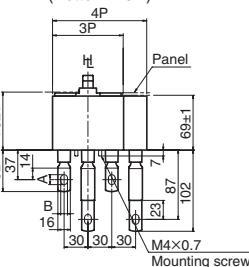

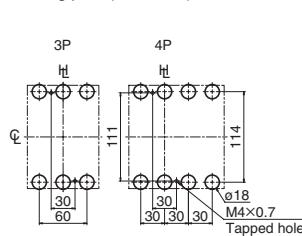

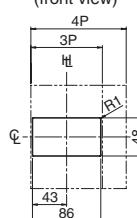

Note) If you will arrange the studs vertically, please insulate them carefully with insulating tubes, insulating tape, or similar because the insulation distance between the studs is insufficient.

Rated current (A)	A	B	C	D	E	F
25-40	10.5	6.5	4	13	16	4
63-160	12.5	8.5	4	13	16	5

3 Order Form of Internal accessories	8-4

1 Maintenance and Inspection Checker

TNS-3 OCR Checker

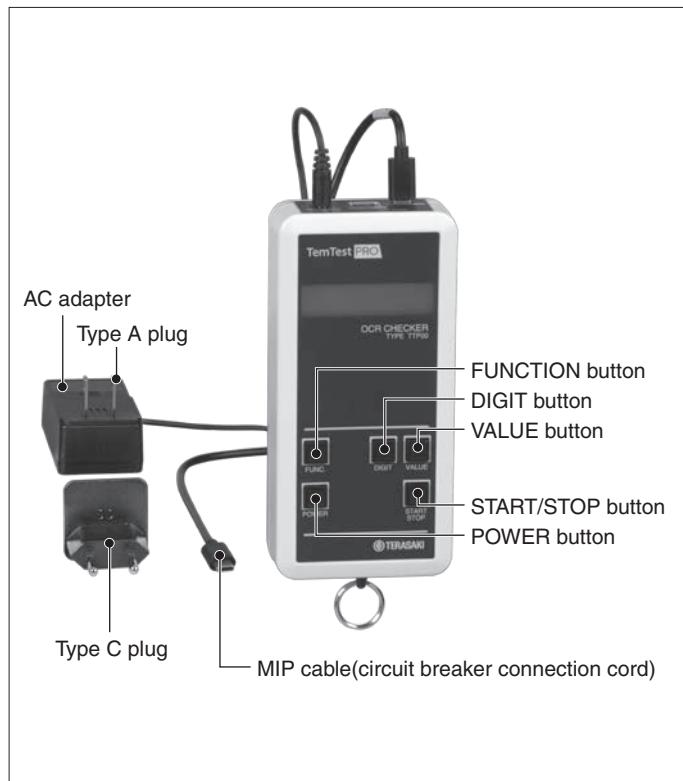

The TNS-3 type OCR checker can be used to easily check the trip function of XOU type OCR and XOS type OCR electronic circuit breakers and AGR12BL type OCR AR-E type air circuit breakers in the field. The types of check are the set current value and tripping time of each of Long Time Delay (LTD), Short Time Delay (STD), Instantaneous (INST), and Ground Fault Trip (GFT). Please use the checker according to the application.

Ratings and Specifications

Type	TNS-3	
Power Source	100~240V AC Single Phase 50/60Hz	
Power Consumption	30VA	
Application (Please use with no power flowing through the circuit breaker)	<ul style="list-style-type: none"> ● LTD function check ● STD function check ● INST function check ● GFT function check ● Preferential trip alarm function check 	
Measurement of set current values	<ul style="list-style-type: none"> ● Display 4-digit digital display ● Range XOS(OCR) 0~750mA ● Range XOU(OCR) 0~1500mA 	
Measurement of tripping time values	<ul style="list-style-type: none"> ● Display 3-digit digital display ● Range 0.01~999.9s 	
Outline Dimensions	241mm(W)×157mm(H)×109mm(D)	
Weight	2.3kg	
Accessories	● Power cord (with power conversion plug type C) 3m, 1pc	
Optional	Order codes ① TNS-3 CABLE1 XOS type OCR MIP cable 2m, 1pc TNS-3 CABLE2 XOU type OCR (for 400 to 1600AF) MIP cable 2m, 1pc TNS-3 CABLE3 XOU type OCR (for 225AF) MIP cable 2m, 1pc TNS-3 CABLE4 AGR-12 BL type OCR (for AR-E type ACB) MIP cable 2m, 1pc	

Note ① : MIP cables are not provided as standard. Please specify the cables you require separately.

TTP00 OCR Checker

The TTP00 type OCR checker can be used to easily check the trip function of TPOT type OCR, TPOP type OCR, and TPOU type OCR electronic circuit breakers in the field.

Ratings and Specifications

Type	TTP00	
Power Source	Single-phase 100 to 240V AC, 50/60Hz or AA alkaline batteries 1.5V × 4 or nickel-metal hydride rechargeable batteries 1.2V × 4	
Power Consumption	3VA	
Application (Please use with no power flowing through the circuit breaker)	<ul style="list-style-type: none"> ● LTD function check ● STD function check ● INST function check ● Preferential trip alarm function check ● GF function check ● N-phase protection function check 	
Measurement of set current values	<ul style="list-style-type: none"> ● Display 4-digit digital display ● Range 1A~9,999A 	
Measurement of tripping time values	<ul style="list-style-type: none"> ● Display Digital display (0.01s unit for 9.99s or less, 0.1s unit for 10.0s or more) ● Range 0.01~999.9sec 	
Outline Dimensions	80mm(W)×165mm(H)×35mm(D)	
Weight	0.4kg (including accessories)	
Accessories	MIP cable 2m × 1pc AC adapter (with power cord 1.9m) × 1unit AC adapter plug Type A (for domestic use) × 1pc Type C (for Europe) × 1pc	
Optional cable ①	[Order codes] TPPMCA MIP cable for TPOT, TPOP and TPOU OCR 2m × 1pc TPPCCA MIP cable for calibration	

Note ① : The MIP cable that is included as standard with TTP00 is used for TemPower PRO air circuit breakers, when using TTP00 for electronic circuit breaker, be sure to order the TPPMCA type MIP cable.

Notes ① : The resistance value is a general reference value when new. It cannot be used for inspections when receiving goods.

② : The power consumptions are calculated on the basis of the DC internal resistance.

③ : The value of the Draw-out type.

④ : The value of the Rear-connected type.

TM: Thermal type

ELE: Electronic type

3 Order Form of Internal accessories

Internal accessory order type

The following internal accessories are parts that can be mounted with one touch. They make it possible to quickly respond to emergencies and specification changes. When ordering, please specify the type ordered and quantity.

Internally mounted accessories	Moulded Case Circuit Breakers	Specification		Accessory order type ①
Auxiliary switch (AX)	E160-SF/SJ, E250-SCF/SCJ/SF/SJ, S160-SCF/SCJ/SF/SJ/SN, S250-SN, P160F/N/H/D, P250F/N/H/D, P400E/F/N/H/S/D, P630E/F/N/H/S/D	Standard ②	1C contact	AX00LML3ST
			2C contact	AX00LML4ST
		For microload ②	1C contact	AX00LML3RT
			2C contact	AX00LML4RT
	S800-CJ/NJ/NE/RJ/RE/PJ/PE/NN, S1000-SE/NE/NN, S1250-SE/NE/GE/NN, S1600-SE/NE/NN, H125-NJ, H160-NJ, H250-NJ/NE, H400-NE, H800-NE L125-NJ, L125-PJ, L160-NJ, L250-NJ, L400-NE, L400-PE, L800-NE, L800-PE	Standard②	1C contact	AX00M3ST
			2C contact	AX00M4ST
			3C contact	AX00M5ST
			4C contact	AX00M6ST
Alarm switch (AL)	E160-SF/SJ, E250-SCF/SCJ/SF/SJ, S160-SCF/SCJ/SF/SJ/SN, S250-SN, P160F/N/H/D, P250F/N/H/D, P400E/F/N/H/S/D, P630E/F/N/H/S/D	Standard	1C contact. Left side mounting	AL00LML3ST
			2C contact. Right side mounting	AL00LMR4ST
		For microload	1C contact. Left side mounting	AL00LML3RT
			2C contact. Right side mounting	AL00LMR4RT
	S800-CJ/NJ/NE/RJ/RE/PJ/PE/NN, S1000-SE/NE/NN, S1250-SE/NE/GE/NN, S1600-SE/NE/NN, H125-NJ, H160-NJ, H250-NJ/NE, H400-NE, H800-NE L125-NJ, L125-PJ, L160-NJ, L250-NJ, L400-NE, L400-PE, L800-NE, L800-PE	Standard	1C contact	AL00M3ST
			For microload	1C contact
				AL00M3RT

Notes ① : All internal accessories are with terminals. The cable capacity of the terminals is 0.5 to 1.25mm².

② : 2C to 4C contacts do not mean there are 2 to 4 switches, but one switch on the 2nd C, 3rd C, and 4th C with ring marks labeled 2C, 3C, 4C. For auxiliary switches or alarm switches, left-hand mounting has priority.

TemCurve Lite

- for windows XP/vista/7/8/8.1/10 -

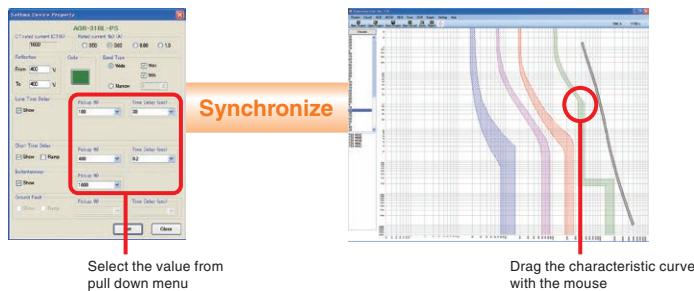

TemCurve Lite

can carry out the selectivity studies for Terasaki low-voltage air circuit breakers and moulded case circuit breakers very **simply** and **quickly**.

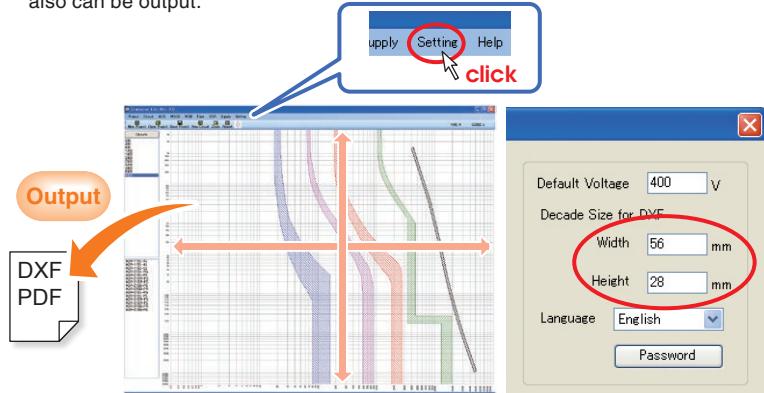

Time-current curves can be adjusted easily

The time-current curves can be adjusted by choosing different pick-up currents and the operating times. The time-current curves can also be easily adjusted by using the curve drag feature.

Output the coordination characteristics curves into CAD

The time-current curves drawn can be output in a DXF format file, and can be used in CAD software. Moreover, you can adjust the scale of the graph for the curves on a horizontal axis (current) and a vertical axis (time). PDF format file also can be output.

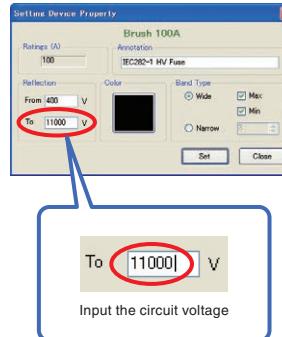

Comprehensive device database

Included in the software are high-voltage and low-voltage fuses, Terasaki air circuit breakers, Terasaki moulded case circuit breakers, Terasaki miniature breakers for distribution boards and overcurrent relays, etc. Moreover, it is possible to input thermal resistant characteristics of generators if needed, and to have a look at generator protections coordination.

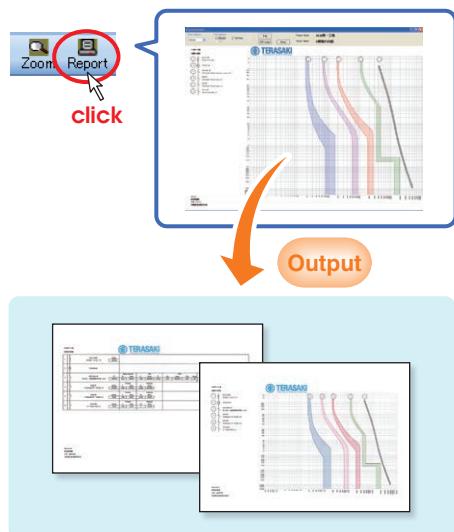

Simple coordination with high-voltage devices

It is possible to coordinate between high-voltage and low-voltage devices by inputting the voltage of the high-voltage side.

Output single line diagram with the setting values of the devices

Once the time-current curves are drawn, a single line diagram can be printed with individual device settings.

TemCurve Lite is the free software for windows XP/ vista / 7 / 8 / 8.1/10.
