

=====

Name of software: TemCurve Lite Selectivity Analysis Software

Version: 5.1

System requirements: Microsoft Windows [7 / 8 / 8.1 /10]

=====

[Install]

Double click the file: setup.exe
and run it according to the instructions in the program.

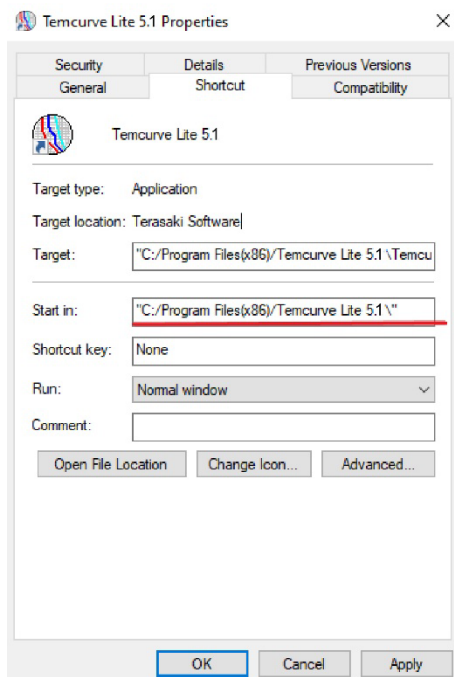

In Windows 10, Windows Defender SmartScreen may display a warning screen.
In that case, press Details and then Run button.

[Uninstall]

Select My Computer and open the Control Panel.
Select the Add/Remove Programs applet and select TemCurve Lite and press
Delete button.

[Other]

To create a shortcut on the desktop
enter "C: / Program Files /Temcurve Lite 5.1\" in the work folder
on the shortcut property screen.
If the work folder is blank, PDF files and DXF files will not be output normally.
